Preface	xi
Thanks	xv
Chapter 1. Fourier Series	1
1.1. Choices: Welcome Aboard	1
1.2. Periodic Phenomena	2
1.3. It All Adds Up	8
1.4. Two Examples and a Warning	20
1.5. The Math, Part 1: A Convergence Result	25
1.6. Fourier Series in Action	28
1.7. The Math, Part 2: Orthogonality and Square Integrable Functions	42
1.8. Appendix: Notes on the Convergence of Fourier Series	60
1.9. Appendix: The Cauchy-Schwarz Inequality	70
Problems and Further Results	75
Chapter 2. Fourier Transform	99
2.1. A First Look at the Fourier Transform	99
2.2. Getting to Know Your Fourier Transform	111
2.3. Getting to Know Your Fourier Transform, Better	118
2.4. Different Definitions of the Fourier Transform, and What Happens to the Formulas	135
Problems and Further Results	136
Chapter 3. Convolution	159
3.1. $A * B$ Is Born	159
3.2. What Is Convolution, Really?	164

3.3. Properties of Convolution: It's a Lot Like Multiplication	167
3.4. Convolution in Action I: A Little Bit on Filtering	169
3.5. Convolution in Action II: Differential Equations	174
3.6. Convolution in Action III: The Central Limit Theorem	185
3.7. Heisenberg's Inequality	202
Problems and Further Results	205
Chapter 4. Distributions and Their Fourier Transforms	229
4.1. The Day of Reckoning	229
4.2. The Best Functions for Fourier Transforms: Rapidly Decreasing Functions	235
4.3. A Very Little on Integrals	244
4.4. Distributions	249
4.5. Defining Distributions	268
4.6. Fluxions Finis: The End of Differential Calculus	285
4.7. Convolutions and the Convolution Theorem	292
4.8. Appendix: Windowing, Convolution, and Smoothing	298
4.9. Epilog and Some References	311
Problems and Further Results	312
Chapter 5. δ Hard at Work	321
5.1. Filters, Redux	322
5.2. Diffraction: Sincs Live and in Pure Color	323
5.3. X-Ray Diffraction	333
5.4. The III-Function on Its Own	335
5.5. Periodic Distributions and Fourier Series	342
5.6. A Formula for δ Applied to a Function, and a Mention of Pullbacks	344
5.7. Cutting Off a δ	347
5.8. Appendix: How Special Is III?	348
Problems and Further Results	349
Chapter 6. Sampling and Interpolation	359
6.1. Sampling sines and the Idea of a Bandlimited Signal	359
6.2. Sampling and Interpolation for Bandlimited Signals	362
6.3. Undersampling and Aliasing	371
6.4. Finite Sampling for a Bandlimited Periodic Signal	380
6.5. Appendix: Timelimited vs. Bandlimited Signals	386
6.6. Appendix: Linear Interpolation via Convolution	388
6.7. Appendix: Lagrange Interpolation	390
Problems and Further Results	391

Chapter 7. Discrete Fourier Transform	411
7.1. The Modern World	411
7.2. From Continuous to Discrete	412
7.3. The Discrete Fourier Transform	414
7.4. Notations and Conventions 1	416
7.5. Two Grids, Reciprocally Related	420
7.6. Getting to Know Your Discrete Fourier Transform	421
7.7. Notations and Conventions 2	430
7.8. Getting to Know Your DFT, Better	436
7.9. The Discrete Rect and Its DFT	444
7.10. Discrete Sampling and Interpolation	446
7.11. The FFT Algorithm	449
Problems and Further Results	466
Chapter 8. Linear Time-Invariant Systems	483
8.1. We Are All Systemizers Now	483
8.2. Linear Systems	484
8.3. Examples	487
8.4. Cascading Linear Systems	492
8.5. The Impulse Response, or the Deepest Fact in the Theory of Distributions Is Well Known to All Electrical Engineers	494
8.6. Linear Time-Invariant (LTI) Systems	499
8.7. The Fourier Transform and LTI Systems	504
8.8. Causality	509
8.9. The Hilbert Transform	511
8.10. Filters Finis	519
8.11. A Tribute: The Linear Millennium	530
Problems and Further Results	532
Chapter 9. n -Dimensional Fourier Transform	549
9.1. Space, the Final Frontier	549
9.2. Getting to Know Your Higher-Dimensional Fourier Transform	559
9.3. A Little δ Now, More Later	577
9.4. Higher-Dimensional Fourier Series	581
9.5. III, Lattices, Crystals, and Sampling	592
9.6. The Higher-Dimensional DFT	609
9.7. Naked to the Bone	611
9.8. Appendix: Line Impulses	626
9.9. Appendix: Pullback of a Distribution	637
Problems and Further Results	642

Appendix A. A List of Mathematical Topics that Are Fair Game	661
Appendix B. Complex Numbers and Complex Exponentials	665
B.1. Complex Numbers	665
B.2. The Complex Exponential and Euler's Formula	668
B.3. Further Applications of Euler's Formula	672
Problems and Further Results	675
Appendix C. Geometric Sums	677
Problems and Further Results	679
Index	681
