List of Figures	xiii
List of Tables	xv
List of Notation	xvii
Preface	xxvii
1 Introduction	1
1.1 Petroleum Reservoir Simulation	1
1.2 Classical Reservoir Engineering Methods	1
1.2.1 Material Balance Methods	1
1.2.2 Decline Curve Methods	2
1.2.3 Statistical Methods	2
1.2.4 Analytical Methods	2
1.3 Reservoir Simulation Methods	3
1.3.1 Reservoir Simulation Stages	3
1.3.2 Reservoir Simulator Classifications	4
1.3.3 Reservoir Simulation Applications	4
1.4 SI Metric Conversion Factors	6
2 A Glossary of Petroleum Terms	7
2.1 Reservoir Rock Properties	7
2.2 Reservoir Fluid Properties	9
2.3 Wettability	12
2.4 Fluid Displacement Processes	13
2.5 Reservoir Rock/Fluid Properties	13
2.5.1 Two-Phase Relative Permeability	15
2.5.2 Three-Phase Relative Permeability	17
2.6 Terms Used in Numerical Simulation	20
3 Single-Phase Flow and Numerical Solution	23
3.1 Basic Differential Equations	23
3.1.1 Mass Conservation	23
3.1.2 Darcy's Law	25

3.1.3	Units	26
3.1.4	Different Forms of Flow Equations	26
3.2	An Analytic Solution	31
3.3	Finite Difference Methods	34
3.3.1	First Difference Quotients	34
3.3.2	Second Difference Quotients	36
3.3.3	Grid Systems	38
3.3.4	Treatment of Boundary Conditions	39
3.3.5	Finite Differences for Stationary Problems	41
3.3.6	Finite Differences for Parabolic Problems	42
3.3.7	Consistency, Stability, and Convergence	44
3.3.8	Finite Differences for Hyperbolic Problems	48
3.4	Numerical Solution of Single-Phase Flow	51
3.4.1	Treatment of Initial Conditions	52
3.4.2	Time Discretization	52
3.4.3	Spatial Discretization	53
3.4.4	Treatment of Block Transmissibility	53
3.4.5	Solution Approaches in Time	56
3.4.6	Material Balance Analysis	63
4	Well Modeling	67
4.1	Introduction	67
4.2	Analytical Formulas	68
4.3	Single-Layer Well Models	69
4.3.1	Square Grids	69
4.3.2	Extensions	71
4.4	Multilayer Well Models	74
4.5	Coupling of Flow and Well Equations	75
4.6	Coupling of Wellbore-Hydraulics and Reservoir Models	78
4.6.1	Single-Phase Flow	78
4.6.2	Multiphase Flow	79
5	Two-Phase Flow and Numerical Solution	83
5.1	Basic Differential Equations	83
5.1.1	Mass Conservation	83
5.1.2	Darcy's Law	84
5.1.3	Alternative Differential Equations	85
5.1.4	Boundary Conditions	89
5.2	An Analytic Solution	91
5.2.1	Analytic Solution Before Water Breakthrough	91
5.2.2	Analytic Solution at the Water Front	92
5.2.3	Analytic Solution After Water Breakthrough	93
5.3	Numerical Solution of Two-Phase Flow	94
5.3.1	Treatment of Initial Conditions	95
5.3.2	Source/Sink Terms	95
5.3.3	Spatial Discretization	96

5.3.4	Treatment of Block Transmissibility	97
5.3.5	Solution Approaches in Time	99
6	The Black Oil Model and Numerical Solution	103
6.1	Basic Differential Equations	103
6.1.1	Mass Conservation and Darcy's Law	103
6.1.2	Rock/Fluid Properties	106
6.1.3	Fluid Properties	107
6.1.4	Phase States	108
6.2	Numerical Solution of the Black Oil Model	109
6.2.1	Treatment of Initial Conditions	110
6.2.2	Simultaneous Solution Techniques	112
6.2.3	Sequential Solution Techniques	120
6.2.4	Iterative IMPES Solution Techniques	124
6.2.5	Adaptive Implicit Techniques	127
6.2.6	Well Coupling	128
7	Transport of Multicomponents in a Fluid and Numerical Solution	131
7.1	Basic Differential Equations	132
7.2	Computation of Fluid Viscosity	133
7.3	Equations of State	134
7.4	Diffusion, Dispersion, and Tortuosity	136
7.4.1	Fick's Law	136
7.4.2	Impact of Tortuosity on Diffusion	137
7.4.3	Soret Effects and Gravity Segregation	146
7.4.4	Isothermal Gravity/Chemical Equilibrium	147
7.5	Numerical Solution	148
7.5.1	A Model Problem	148
7.5.2	Finite Difference Equations	149
7.6	Nonisothermal Flow	152
7.7	Examples	152
7.7.1	Forced Convection	152
7.7.2	Forced Convection Plus Dispersion	154
8	Compositional Flow and Numerical Solution	157
8.1	Basic Differential Equations	157
8.1.1	Mass Conservation and Darcy's Law	157
8.1.2	Equations of State	159
8.2	Numerical Solution of Compositional Flow	161
8.2.1	Choice of Primary Variables	162
8.2.2	Finite Difference Equations	164
8.3	Solution of Equilibrium Relations	170
8.3.1	Successive Substitution Method	170
8.3.2	Newton–Raphson Flash Calculation	171
8.3.3	Derivatives of Fugacity Coefficients	172
8.3.4	Solution of the PR Cubic Equation	173

8.3.5	Practical Considerations	175
9	Nonisothermal Flow and Numerical Solution	177
9.1	Basic Differential Equations	178
9.1.1	Mass Conservation and Darcy's Law	178
9.1.2	Energy Conservation	179
9.1.3	Rock Properties	180
9.1.4	Fluid Properties	181
9.2	Numerical Solution of Nonisothermal Flow	182
9.2.1	Choice of Primary Variables	183
9.2.2	Finite Difference Equations	184
10	Practical Topics in Reservoir Simulation	193
10.1	Design of Study Objectives	193
10.2	Analysis of Reservoir Data	195
10.2.1	Geophysical Data	196
10.2.2	Geological Data	197
10.2.3	Engineering Data	197
10.3	Development of Simulation Models	198
10.3.1	Model Selection	198
10.3.2	Grid Selection	200
10.4	History Matching	203
10.5	Prediction of Reservoir Performance	204
	Bibliography	205
	Index	215
