

Contents

Preface	xiii
Acknowledgments	xvi
Bibliography	xvii
1 Compartmental Epidemic Models	1
1.1 Introduction to Compartmental Models	1
1.2 The Simple Kermack–McKendrick Model	1
1.3 A Branching Process Disease Outbreak Model	8
1.4 More Complicated Epidemic Models	11
1.5 The Age of Infection Epidemic Model	19
1.6 Models with Disease Deaths	25
1.7 Directions for Generalization	27
Bibliography	28
2 Models for Endemic Diseases	31
2.1 A Model for Diseases with No Immunity	31
2.2 The <i>SIR</i> Model with Births and Deaths	34
2.3 Some Applications	38
2.4 The <i>SIS</i> Model with Births and Deaths	39
2.5 A Vaccination Model: Backward Bifurcations	40
2.6 Temporary Immunity	46
2.7 Diseases in Exponentially Growing Populations	50
Bibliography	53
3 Heterogeneity in Epidemic Models	55
3.1 Introduction to Heterogeneity	55
3.2 A Vaccination Model	55
3.3 The Next Generation Matrix	57
3.4 Vector Transmission	63
3.5 Heterogeneous Mixing	64
3.6 The Final Size Relation	67
3.7 Heterogeneous Mixing Age of Infection Models	68
3.8 Extensions	71
Bibliography	72

4	Models Structured by Age	75
4.1	Introduction to Age Structure	75
4.2	Linear Age-Structured Models	76
4.3	The Method of Characteristics	78
4.4	Nonlinear Age-Structured Models	82
4.5	Age-Structured Epidemic Models	86
	Bibliography	88
5	Models for Diseases in Highly Mobile Populations	93
5.1	Introduction to Models for Mobile Populations	93
5.2	Contact Structures Framework	94
5.3	Modeling Epidemics in Urban Centers	97
5.4	Model for the Deliberate Release of Communicable Diseases	99
5.5	A Two-Neighborhood Example	109
5.6	Review and Discussion	111
	Bibliography	113
6	Modeling Influenza	121
6.1	Introduction to Influenza Models	121
6.2	A Basic Influenza Model	122
6.3	Vaccination	125
6.4	Antiviral Treatment	128
6.5	A More Detailed Model	132
6.6	The Influenza Pandemic of 2009	134
6.7	Extensions and Other Types of Model	138
	Bibliography	139
7	Models for the Dynamics of Influenza	143
7.1	Influenza Modeling and Cross-Immunity	143
7.2	Basic Model	146
7.3	Cross-Immunity and Quarantine	150
7.4	Epidemic <i>SIR</i> Models with Age Structure and Cross-Immunity	153
7.5	Discussion and Future Work	157
	Bibliography	157
8	Models for the Transmission Dynamics of HIV	163
8.1	Introduction	163
8.2	Model with Exponential Waiting Times	165
8.3	HIV Model with Arbitrary Incubation Period Distributions	172
8.4	HIV and Tuberculosis: Dynamics of Coinfections	176
8.5	Final Thoughts	180
	Bibliography	182
9	Dynamical Models of Tuberculosis and Applications	191
9.1	Introduction	191
9.2	Intrinsic Mechanics of Transmission	192
9.3	Treatment of Latent TB—Theoretical Modeling Results	206
9.4	Key to the Elimination of TB	207

9.5	Thoughts and Conclusions	211
	Bibliography	212
10	Models for Sexually Transmitted Diseases	219
10.1	Single and Two-Sex STD Models	219
10.2	Sir Ronald Ross and STD Models	219
10.3	Two-Strain Multigroup Single-Sex Model	221
10.4	Two-Sex STD Models	229
10.5	Transactional Sex and HIV in Nigeria	236
10.6	Coupling of the Core and General Populations	243
10.7	Conclusions and Final Thoughts	252
	Bibliography	254
	Index	263
