

|  |     |
|--|-----|
| Preface to the Classics Edition  | i   |
| Preface  | v   |
| Introduction   | 1   |
| 1. Preliminaries   | 7   |
| §1. The marriage problem   | 7   |
| §2. Birkhoff's theorem   | 11  |
| §3. Majorization   | 11  |
| §4. Tensor products  |     |
| Notes and references   | 16  |
| 2. Singular values and norms   | 18  |
| §5. Singular values and polar decomposition                            | 18  |
| §6. The minmax principle   | 20  |
| §7. Symmetric gauge functions and norms                                | 24  |
| Notes and references   | 31  |
| 3. Spectral variation of Hermitian matrices                            | 34  |
| §8. Weyl's inequalities  | 34  |
| §9. The Lidskii-Wielandt theorem                                       | 38  |
| §10. Matrices with real eigenvalues and Lax's theorem                  | 46  |
| Notes and references   | 50  |
| 4. Spectral variation of normal matrices                               | 52  |
| §11. Introduction to chapter 4   | 52  |
| §12. The Hausdorff distance between spectra                            | 53  |
| §13. Geometry and spectral variation I                                 | 55  |
| §14. Geometry and spectral variation II                                | 63  |
| §15. The Hoffman-Wieland theorem                                       | 74  |
| §16. Perturbation of spectral spaces                                   | 76  |
| §17. The cyclic order  | 82  |
| §18. An inequality of Sunder   | 85  |
| Notes and references   | 86  |
| 5. The general spectral variation problem                              | 89  |
| §19. The distance between roots of polynomials                         | 89  |
| §20. Variation of Grassman powers and spectra                          | 94  |
| §21. Some more spectral variation bounds                               | 99  |
| §22. Spectral variation for the classical Lie algebras                 | 104 |
| Notes and references   | 105 |
| 6. Arbitrary perturbations of constrained matrices                     | 108 |
| §23. Arbitrary perturbations of Hermitian matrices and Kahan's results | 108 |

|   |     |
|---|-----|
| §24. Arbitrary perturbations of normal matrices         | 112 |
| §25. The Bauer-Fike theorem                             | 113 |
| Notes and references                                    | 116 |
| Postscripts   | 118 |
| References  | 122 |
| <b>Supplements 1986-2006</b>                            |     |
| 7. Singular values and norms                            | 133 |
| §26. The minmax principle                               | 133 |
| §27. Symmetric gauge functions and norms                | 135 |
| Notes and references                                    | 139 |
| 8. Spectral variation of Hermitian matrices             | 140 |
| §28. Bounds in the Frobenius norm                       | 140 |
| §29. Partitioned Hermitian matrices                     | 142 |
| §30. Lidskii's Theorem                                  | 146 |
| §31. Horn's problem                                     | 148 |
| §32. Lax's theorem and hyperbolic polynomials           | 149 |
| Notes and references                                    | 150 |
| 9. Spectral variation of normal matrices                | 152 |
| §33. The elusive bound                                  | 152 |
| §34. Hermitian and skew-Hermitian matrices              | 154 |
| §35. A table of known and unknown constants             | 158 |
| Notes and references                                    | 159 |
| 10. Spectral variation of diagonalizable matrices       | 161 |
| §36. The Sylvester equation and commutator inequalities | 161 |
| §37. Diagonalizable matrices                            | 164 |
| Notes and references                                    | 166 |
| 11. The general spectral variation problem              | 167 |
| §38. The distance between roots of polynomials          | 167 |
| §39. The distance between eigenvalues                   | 170 |
| Notes and references                                    | 171 |
| 12. Arbitrary perturbations of constrained matrices     | 172 |
| §40. Arbitrary perturbations of normal matrices         | 172 |
| Notes and references                                    | 175 |
| 13. Related Topics                                      | 176 |

|   |     |
|---|-----|
| §41. Operators on infinite-dimensional spaces | 176 |
| §42. Joint spectra of commuting matrices      | 179 |
| §43. Relative perturbation theory             | 183 |
| Notes and references                          | 183 |
| Bibliography                                  | 185 |
| Errata  | 191 |
