Preface to the Second Edition	ix
Preface to the First Edition	xv
List of Symbols	xxi
Acronyms	xxiii
I Stability analysis of linear time-delay systems	1
1 Spectral properties of linear time-delay systems	3
1.1 Time-delay systems of retarded type	4
1.2 Time-delay systems of neutral type	14
1.3 Systems described by delay-differential algebraic equations	30
1.4 Notes and references	36
2 Computation of characteristic roots	39
2.1 Introduction	39
2.2 Computing all characteristic roots in a right half plane	40
2.3 Neutral systems and delay-differential algebraic equations	54
2.4 Large-scale problems	59
2.5 Notes and references	65
3 Pseudospectra and robust stability analysis	69
3.1 Introduction	69
3.2 Pseudospectra for nonlinear eigenvalue problems	71
3.3 Structured pseudospectra for nonlinear eigenvalue problems	78
3.4 Illustrative examples	84
3.5 Stability radii in delay parameter spaces	88
3.6 Notes and references	91
4 Computation of \mathcal{H}_2 and \mathcal{H}_∞ norms	93
4.1 Introduction	93
4.2 Computing \mathcal{H}_∞ norms	95
4.3 Computing \mathcal{H}_2 norms	110
4.4 Notes and references	117

5	Computation of stability regions in parameter spaces	119
5.1	Introduction	119
5.2	Basic notions and definitions	120
5.3	From D-decomposition to numerical continuation	121
5.4	Computing the crossing direction of characteristic roots	132
5.5	Computing the root-locus	142
5.6	Notes and references	145
6	Stability regions in delay-parameter spaces	149
6.1	Introduction	149
6.2	Invariance properties	150
6.3	Algebraic methods	153
6.4	Geometric methods	168
6.5	Delay ratio sensitivity and delay-interference phenomenon	180
6.6	Notes and references	188
II	Stabilization and robust fixed-order control	191
7	Stabilization using a direct eigenvalue optimization approach	193
7.1	Fixed-order control design	193
7.2	Stabilization via eigenvalue optimization	194
7.3	Numerical examples	200
7.4	Systems described by delay-differential algebraic equations	202
7.5	Notes and references	208
8	Stabilizability with delayed feedback: A numerical case study	211
8.1	Introduction	211
8.2	Characterization of stabilizable systems	212
8.3	Simultaneous stabilization over a delay interval	219
8.4	Stabilizability using Pyragas-type feedback	222
8.5	Notes and references	223
9	Optimization of \mathcal{H}_∞ norms	225
9.1	Introduction	225
9.2	Motivating examples	226
9.3	Preliminaries	228
9.4	The strong \mathcal{H}_∞ norm of time-delay systems	230
9.5	Computation of strong \mathcal{H}_∞ norms	233
9.6	Fixed-order \mathcal{H}_∞ controller design	238
9.7	Examples	239
9.8	Optimization of stability radii	243
9.9	Notes and references	245
III	Applications	247
10	Output feedback stabilization using delays as control parameters	249
10.1	Introduction	249
10.2	Single delay case	250
10.3	Multiple delays case	268

10.4	Network-induced delays case	274
10.5	Notes and references	284
11	Smith predictor for stable systems: Delay sensitivity analysis	285
11.1	Introduction	285
11.2	Sensitivity of stability w.r.t. infinitesimal delay mismatches	287
11.3	Stability analysis and critical delay mismatches	291
11.4	Geometry of stability regions	293
11.5	Multivariable case	297
11.6	Notes and references	300
12	Controlling unstable systems using finite spectrum assignment	301
12.1	Introduction	301
12.2	Preliminaries	302
12.3	Implementation of the integral	304
12.4	Delay mismatch	310
12.5	Output feedback	311
12.6	Notes and references	314
13	Congestion control algorithms in networks	315
13.1	Smith predictor-based congestion control	316
13.2	Algorithms for single connection models with two delays	322
13.3	TCP/AQM congestion avoidance models with one delay	328
13.4	Notes and references	334
14	Consensus problems with distributed delays, with traffic flow applications	337
14.1	Introduction	337
14.2	Extension of stability theory to systems with distributed delays	339
14.3	Conditions for the realization of a consensus	343
14.4	Examples	348
14.5	Other models	349
14.6	Notes and references	351
15	Synchronization of delay-coupled oscillators	353
15.1	Introduction	353
15.2	Preliminaries	355
15.3	Stability analysis of synchronized equilibria	357
15.4	Application to coupled Lorenz systems	361
15.5	Generalizations	371
15.6	Notes and references	373
16	Stability analysis of delay models in biosciences	375
16.1	Introduction	375
16.2	Delay effects on the stability of some biochemical network models	376
16.3	Delay effects on stability in some human respiration models	381
16.4	Delays in immune dynamics models in leukemia	385
16.5	Notes and references	399

Appendix	401
A.1 Rouché’s theorem	401
A.2 The structured singular value	401
A.3 Continuity properties	403
A.4 Interdependency of numbers	403
A.5 Software	404
Bibliography	407
Index	433
