Contents

Preface **xi**

1 Introduction **1**
1.1 Aim and scope 1
1.2 Historical perspective 1
1.3 Organization of the book 3

2 Mathematical Preliminaries **5**
2.1 Signals, systems, and function spaces 5
2.2 System norms 8
2.3 Some special operators 9
2.4 The model matching problem 12
2.5 Two-block problem 24
2.6 Spectral factorization 25
2.7 Computation of the $\mathcal{L}_\infty$ norm 26

3 Transfer Functions of DPSs **31**
3.1 Retarded and neutral delay systems 31
3.2 Pseudorational transfer functions 36
3.3 Other DPS examples 40

4 Factorizations **45**
4.1 Feedback stabilization by coprime factorization 45
4.2 Inner-outer factorizations 57
4.3 Factorization of pseudorational systems 60
4.4 Factorization of time delay systems with finitely many unstable poles 64
4.5 Factorization of time delay systems with infinitely many unstable poles 71
4.6 Factorizations of other DPS examples 79

5 $\mathcal{H}_\infty$ Control Problems **81**
5.1 Robust stability conditions 81
5.2 Mixed sensitivity minimization problem 89
5.3 $\mathcal{H}_\infty$-based estimation 93
5.4 Strong stabilization by a small gain approach 94

6 $\mathcal{H}_\infty$ Optimal Controller: Computational Issues **97**
6.1 Computation of the $\mathcal{H}_\infty$ optimal controller 97
6.2 Stable implementation of the $\mathcal{H}_\infty$ optimal controller 109

6.3 Examples 116
6.4 Approximations 134

7 Controllers for MIMO Plants with Scalar Inner Parts 151
7.1 Mathematical preliminaries for matrix transfer functions 151
7.2 The Nehari problem revisited 155
7.3 Relations with the Zhou–Khargonekar formula 156
7.4 Extension to the standard problem 160
7.5 Duality between unstable zeros and poles 167

Bibliography 173
