

Contents

Preface	vii
1 Introduction	1
1.1 Applications	1
2 Overview on Spaces	5
2.1 Vector Spaces	5
2.2 Convex Sets and Cones	8
2.3 Metric Spaces	8
2.4 Normed Linear Spaces	10
2.5 Inner Product and Hilbert Spaces	10
2.6 Comments and Additional References	16
2.7 Problems	16
3 The MAP on Subspaces	19
3.1 Introduction	19
3.2 The von Neumann Theorem	20
3.3 The Extension of Halperin	24
3.4 Rate of Convergence	27
3.4.1 Angle between Subspaces	27
3.4.2 Rate of Convergence of MAP	29
3.5 Acceleration Techniques	33
3.6 Comments and Additional References	34
3.7 Problems	35
4 Row-Action Methods	39
4.1 Introduction	39
4.2 Some Row-Action Methods	40
4.2.1 The Method of Kaczmarz	40
4.2.2 The Relaxation Method of Agmon, Motzkin, and Schoenberg (MAMS)	41
4.2.3 Hildreth's Method	42
4.2.4 Successive Orthogonal Projections	44
4.2.5 Cimmino's Method	44

4.2.6	Bregman's Generalization of the Method of Successive Projections	45
4.3	Acceleration Schemes	46
4.4	Convex Feasibility Problems	47
4.5	Comments and Additional References	51
4.6	Problems	53
5	Projecting onto Convex Sets	55
5.1	Dykstra's Algorithm	55
5.2	Stopping Criteria	66
5.3	Rate of Convergence	68
5.4	Comments and Additional References	72
5.5	Problems	73
6	Applications of MAP for Matrix Problems	75
6.1	Solving Constrained Least-Squares Matrix Problems	75
6.1.1	Description of the General Problem	75
6.1.2	The Feasible Region	76
6.1.3	The Algorithm	77
6.1.4	An Improved Version of the Algorithm	80
6.1.5	Numerical Experiments	83
6.1.6	Constrained Least-Squares Rectangular Matrix Problems	86
6.1.7	Improved Implementation of the Projection Algorithm onto the ε pd Set	89
6.2	Solving Matrix Model Updating Problems	92
6.2.1	Description of the Problem	93
6.2.2	Alternating Projection Approach for MMUP	94
6.2.3	Numerical Experiments	98
6.3	Comments and Additional References	100
6.4	Problems	101
	Bibliography	103
	Author Index	121
	Subject Index	125
