<b>Preface</b>	<b>ix</b>
<b>List of Algorithms</b>	<b>xi</b>
<b>1 Financial Indices Appear to Be Stochastic Processes</b>	<b>1</b>
1.1 Brownian motion is also called a Wiener process . . . . .	3
1.2 Stochastic drift and volatility are unique . . . . .	9
1.3 Basic numerics simulate an SDE . . . . .	14
1.4 A binomial lattice prices call option . . . . .	20
1.5 Summary . . . . .	32
Exercises . . . . .	33
<b>2 Ito's Stochastic Calculus Introduced</b>	<b>39</b>
2.1 Multiplicative noise reduces exponential growth . . . . .	39
2.2 Ito's formula solves some SDEs . . . . .	43
2.3 The Black–Scholes equation prices options accurately . . . . .	48
2.4 Summary . . . . .	56
Exercises . . . . .	57
<b>3 The Fokker–Planck Equation Describes the Probability Distribution</b>	<b>61</b>
3.1 The probability distribution evolves forward in time . . . . .	65
3.2 Stochastically solve deterministic differential equations . . . . .	76
3.3 The Kolmogorov backward equation completes the picture . . . . .	84
3.4 Summary . . . . .	86
Exercises . . . . .	87
<b>4 Stochastic Integration Proves Ito's Formula</b>	<b>93</b>
4.1 The Ito integral $\int_a^b f dW$ . . . . .	95
4.2 The Ito formula . . . . .	106
4.3 Summary . . . . .	112
Exercises . . . . .	113
<b>Appendix A Extra MATLAB/SCILAB Code</b>	<b>115</b>
<b>Appendix B Two Alternate Proofs</b>	<b>119</b>
B.1 Fokker–Planck equation . . . . .	119

---

B.2	Kolmogorov backward equation . . . . .	121
<b>Bibliography</b>		<b>125</b>
<b>Index</b>		<b>127</b>
