List of Contributors	ix
List of Figures	xi
Preface	xv
List of Notation	xvii
1 What is Convex Algebraic Geometry?	1
<i>Grigoriy Blekherman, Pablo A. Parrilo, and Rekha R. Thomas</i>	
2 Semidefinite Optimization	3
<i>Pablo A. Parrilo</i>	
2.1 From Linear to Semidefinite Optimization	3
2.2 Applications of Semidefinite Optimization	25
2.3 Algorithms and Software	41
Bibliography	43
3 Polynomial Optimization, Sums of Squares, and Applications	47
<i>Pablo A. Parrilo</i>	
3.1 Nonnegative Polynomials and Sums of Squares	48
3.2 Applications of Sum of Squares Programs	76
3.3 Special Cases and Structure Exploitation	86
3.4 Infeasibility Certificates	106
3.5 Duality and Sums of Squares	117
3.6 Further Sum of Squares Applications	131
3.7 Software Implementations	148
Bibliography	149
4 Nonnegative Polynomials and Sums of Squares	159
<i>Grigoriy Blekherman</i>	
4.1 Introduction	159
4.2 A Deeper Look	161

4.3	The Hypercube Example	163
4.4	Symmetries, Dual Cones, and Facial Structure	167
4.5	Generalizing the Hypercube Example	172
4.6	Dual Cone of $\Sigma_{n,2d}$	176
4.7	Ranks of Extreme Rays of $\Sigma_{3,6}^*$ and $\Sigma_{4,4}^*$	182
4.8	Extracting Finite Point Sets	184
4.9	Volumes	185
4.10	Convex Forms	195
	Bibliography	200
5	Dualities	203
	<i>Philipp Rostalski and Bernd Sturmfels</i>	
5.1	Introduction	203
5.2	Ingredients	209
5.3	The Optimal Value Function	219
5.4	An Algebraic View of Convex Hulls	224
5.5	Spectrahedra and Semidefinite Programming	231
5.6	Projected Spectrahedra	239
	Bibliography	247
6	Semidefinite Representability	251
	<i>Jiawang Nie</i>	
6.1	Introduction	251
6.2	Spectrahedra	252
6.3	Projected Spectrahedra	261
6.4	Constructing Semidefinite Representations	271
	Bibliography	289
7	Convex Hulls of Algebraic Sets	293
	<i>João Gouveia and Rekha R. Thomas</i>	
7.1	Introduction	293
7.2	The Method	295
7.3	Convergence of Theta Bodies	317
7.4	Combinatorial Optimization	330
	Bibliography	338
8	Free Convexity	341
	<i>J. William Helton, Igor Klep, and Scott McCullough</i>	
8.1	Introduction	341
8.2	Basics of Noncommutative Polynomials and Their Convexity	349
8.3	Computer Algebra Support	366
8.4	A Gram-like Representation	370
8.5	Der QuadratischePositivstellensatz	380
8.6	Noncommutative Varieties with Positive Curvature Have Degree 2	387
8.7	Convex Semialgebraic Noncommutative Sets	396

8.8	From Free Real Algebraic Geometry to the Real World	400
	Bibliography	401
9	Sums of Hermitian Squares: Old and New	407
	<i>Mihai Putinar</i>	
9.1	Introduction	407
9.2	Hermitian Forms and Sums of Squares	408
9.3	Positive Definite Kernels	411
9.4	Origins of Hermitian Forms	416
9.5	Schur's Algorithm	419
9.6	Riesz–Herglotz Theorem	421
9.7	von Neumann's Inequality	425
9.8	Bounded Analytic Interpolation	427
9.9	Perturbations of Self-Adjoint Matrices	429
9.10	Positive Forms in Several Complex Variables	431
9.11	Semirings of Hermitian Squares	435
9.12	Multivariable Miscellanea	438
9.13	Hermitian Squares in the Free $*$ -Algebra	443
9.14	Further Reading	444
	Bibliography	444
A	Background Material	447
	<i>Grigoriy Blekherman, Pablo A. Parrilo, and Rekha R. Thomas</i>	
A.1	Matrices and Quadratic Forms	447
A.2	Convex Optimization	450
A.3	Convex Geometry	453
A.4	Algebra of Polynomials and Ideals	459
	Bibliography	468
	Index	471
