List of Figures	ix
List of Tables	xiii
List of Algorithms	xv
Preface	xvii
I Established Tools of Discrete Optimization	1
1 Tools from Linear and Convex Optimization	3
1.1 Convex sets and polyhedra	3
1.2 Farkas' lemma and feasibility of polyhedra	5
1.3 Weyl–Minkowski's representation theorem	9
1.4 Decomposition of polyhedra as sums of cones and polytopes	14
1.5 Faces, dimension, extreme points	17
1.6 Duality of linear optimization	19
1.7 Remarks on computational complexity	21
1.8 The ellipsoid method and convex feasibility	22
1.9 Applications of the ellipsoid method	26
1.10 Notes and further references	27
1.11 Exercises	28
2 Tools from the Geometry of Numbers and Integer Optimization	29
2.1 Geometry of numbers in the plane	29
2.2 Lattices and linear Diophantine equations	34
2.3 Hermite and Smith	34
2.4 Minkowski's theorems	41
2.5 Gordan and Dickson	43
2.6 Hilbert	44
2.7 Lenstra, Lenstra, Lovász, and the shortest vector problem	49
2.8 Lenstra's algorithm, integer feasibility, and optimization	53
2.9 The integer hull of a polyhedron and cutting planes	55
2.10 Linear versus nonlinear discrete optimization	57
2.11 Notes and further references	58
2.12 Exercises	59

II	Graver Basis Methods	61
3	Graver Bases	63
3.1	Introduction	63
3.2	Graver bases and their representation property	64
3.3	Optimality certificate for separable convex integer programs	65
3.4	How many augmentation steps are needed?	66
3.5	How do we find a Graver-best augmentation step?	68
3.6	How do we find an initial feasible solution?	68
3.7	Bounds for Graver basis elements	69
3.8	Computation of Graver bases	71
3.9	Notes and further references	75
3.10	Exercises	76
4	Graver Bases for Block-Structured Integer Programs	77
4.1	N -fold integer programming	79
4.2	Two-stage stochastic integer programming	88
4.3	N -fold 4-block decomposable integer programs	93
4.4	Notes and further references	101
4.5	Exercises	102
III	Generating Function Methods	103
5	Introduction to Generating Functions	105
5.1	The geometric series as a generating function	105
5.2	Generating functions and objective functions	108
5.3	Generating functions in two dimensions	109
5.4	Notes and further references	114
5.5	Exercises	115
6	Decompositions of Indicator Functions of Polyhedra	117
6.1	Indicator functions and inclusion-exclusion	117
6.2	Gram–Brianchon and Brion	118
6.3	Triangulations of cones and polytopes	120
6.4	Avoiding inclusion-exclusion with half-open decompositions	124
6.5	Notes and further references	127
6.6	Exercises	127
7	Barvinok’s Short Rational Generating Functions	129
7.1	Generating functions and the algorithm of Barvinok	129
7.2	Specialization of the generating function	135
7.3	Explicit enumeration of lattice points	141
7.4	Integer linear optimization with Barvinok’s algorithm	142
7.5	Boolean operations on generating functions	147
7.6	Integer projections	149
7.7	Notes and further references	152
7.8	Exercises	154

8	Global Mixed-Integer Polynomial Optimization via Summation	157
8.1	Approximation algorithms and schemes	157
8.2	The summation method	159
8.3	FPTAS for maximizing nonnegative polynomials over integer points of polytopes	159
8.4	Extension to mixed-integer optimization via discretization	165
8.5	Extension to objective functions of arbitrary range	172
8.6	Notes and further references	176
8.7	Exercises	176
9	Multicriteria Integer Linear Optimization via Integer Projection	179
9.1	Introduction	179
9.2	The rational generating function encoding of all Pareto optima	182
9.3	Efficiently listing all Pareto optima	185
9.4	Selecting a Pareto optimum using polyhedral global criteria	185
9.5	Selecting a Pareto optimum using a nonpolyhedral global criterion	186
9.6	Notes and further references	190
9.7	Exercises	190
IV	Gröbner Basis Methods	191
10	Computations with Polynomials	193
10.1	Introduction	193
10.2	Univariate polynomials	194
10.3	Systems of multivariate polynomial equations	201
10.4	Monomial orders and the multivariate division algorithm	203
10.5	Gröbner bases and Buchberger’s algorithm	208
10.6	Notes and further references	214
10.7	Exercises	214
11	Gröbner Bases in Integer Programming	217
11.1	Toric ideals and their Gröbner bases	217
11.2	Toric ideals and integer programming	218
11.3	Generating sets and toric ideals of lattice ideals	220
11.4	Computing generating sets of lattice ideals	228
11.5	Notes and further references	232
11.6	Exercises	233
V	Nullstellensatz and Positivstellensatz Relaxations	235
12	The Nullstellensatz in Discrete Optimization	237
12.1	Motivation and examples	237
12.2	Nullstellensatz and solving combinatorial systems of equations	239
12.3	A simple proof of the Nullstellensatz	256
12.4	Notes and further references	262
12.5	Exercises	263

13	Positivity of Polynomials and Global Optimization	265
13.1	Unconstrained optimization of polynomials and sums of squares	265
13.2	Positivstellensätze for semidefinite programming relaxations	273
13.3	Approximating the integer hull of combinatorial problems	277
13.4	Notes and further references	279
13.5	Exercises	280
14	Epilogue	281
14.1	Algebraic and topological ideas in linear optimization	281
14.2	Other generating functions techniques in integer programming	283
14.3	Variations on Gomory's group relaxations	285
14.4	Connections to matrix analysis and representation theory	287
	Bibliography	289
	Index	315
