

# Contents

<b>Preface</b>	<b>vii</b>
<b>1 Power engineering basics</b>	<b>1</b>
1.1 Introduction	1
1.2 Power flows	4
1.3 Stability	22
1.4 Power systems control	24
<b>2 Computations with the AC power flow model</b>	<b>31</b>
2.1 Power flow problems revisited	31
2.2 Mathematical background	35
2.3 Semidefinite programming relaxations to the OPF problem	42
2.4 Some recent numerical investigations	52
2.5 Summary	56
<b>3 N-K problem</b>	<b>57</b>
3.1 Mixed-integer programming models for the N-K problem	65
3.2 A cut problem related to N-K analysis	106
3.3 A continuous model related to the N-K problem	112
3.4 Multistage models	124
<b>4 Modeling transmission system cascades: A survey</b>	<b>135</b>
4.1 Introduction	135
4.2 Analysis of recent cascades	137
4.3 Review of prior modeling work	141
<b>5 Toward more comprehensive cascade models</b>	<b>167</b>
5.1 Key modeling issues	167
5.2 Numerical integration	169
5.3 Separated time scale models	171
5.4 Numerical experiments using the separated time scale model	185
5.5 Finer $\Delta t$ cascade models	211
5.6 Numerical experiments using finer time scale models	219
<b>6 Online cascade control</b>	<b>229</b>
6.1 Optimal affine control	234
6.2 Robust controls	250
6.3 The optimal switching problem	263

---

6.4	Toward optimal controls using derivative-free optimization . . . . .	267
6.5	Postscript. Fast computation of optimal, robust controls . . . . .	269
<b>A</b>	<b>Glossary</b>	<b>271</b>
<b>B</b>	<b>Complete power flow derivations</b>	<b>275</b>
	<b>Bibliography</b>	<b>279</b>
	<b>Index</b>	<b>293</b>
