|--|------------|
| Preface | vii |
| 1 Introduction: Uncertainty in optimization and the scenario approach | 1 |
| 1.1 Principles in optimization with uncertainty | 1 |
| 1.2 The scenario approach | 6 |
| 1.3 Generalizations | 20 |
| 2 Problems in control | 21 |
| 2.1 Robust control problems | 21 |
| 2.2 Disturbance compensation | 27 |
| 3 Theoretical results and their interpretation | 33 |
| 3.1 Mathematical setup | 33 |
| 3.2 The generalization theorem of the scenario approach | 38 |
| 3.3 Scenario optimization with constraint removal | 44 |
| 4 Probabilistic vs. deterministic robustness | 49 |
| 4.1 Sure statements vs. statements with a probabilistic validity | 49 |
| 4.2 Beyond the use of models | 53 |
| 5 Proofs | 55 |
| 5.1 Support constraints and fully supported problems | 55 |
| 5.2 Proof of the generalization Theorem 3.7 | 58 |
| 5.3 Proof of Theorem 3.9 | 64 |
| 6 Region estimation models | 67 |
| 6.1 Observations and estimation models | 67 |
| 6.2 Beyond Chebyshev layers | 76 |
| 7 Application to statistical learning | 79 |
| 7.1 An introduction to statistical learning and classification | 79 |
| 7.2 The algorithm GEM | 81 |
| 7.3 Application to breast tumor diagnosis | 86 |
| 8 Miscellanea | 89 |
| 8.1 Probability box | 89 |
| 8.2 L_1 -regularization | 91 |
| 8.3 Fast algorithm for the scenario approach | 93 |
| 8.4 Wait-and-judge | 95 |
| 8.5 Expected shortfall | 99 |
| 8.6 Nonconvex scenario optimization | 101 |
| Bibliography | 109 |
| Index | 115 |
