Preface	xi
1 Boolean Networks	1
1.1 Cell Types and Cellular Functional States	5
1.2 Relevant Nodes	6
1.3 Network Properties and Dynamics	8
1.4 Boolean Models of Biological Networks	15
1.4.1 The segment polarity network of the fruit fly	16
1.4.2 Control of the cell cycle	16
1.4.3 T-cell receptor signaling	20
1.5 Discretization	21
1.5.1 Coefficient of determination	23
2 Structure and Dynamics of Probabilistic Boolean Networks	27
2.1 Markov Chains as Models of Biological Regulation	27
2.2 Definition of Probabilistic Boolean Networks	31
2.3 Dynamics: State Transition Probabilities	34
2.4 The Existence of Steady-State Distributions	38
2.5 Steady-State Analysis of PBNs	40
2.5.1 Steady-state analysis via simulation	44
2.5.2 Steady-state probabilities of attractors and basins	48
2.6 Relationships of PBNs to Bayesian Networks	58
2.6.1 Bayesian networks	58
2.6.2 Independent PBNs and DBNs	63
2.7 Mappings between PBNs	68
3 Inference of Model Structure	81
3.1 Consistent and Best-Fit Extensions	81
3.1.1 Sensitivity regularization	85
3.2 Coefficient of Determination as an Inferential Tool	89
3.3 Design of Networks under Data Consistency Requirements	95
3.3.1 Contextual data consistency	100
3.3.2 Optimization of consistency-based design	108
3.4 Information Theoretic Approaches	115

3.4.1	Minimum description length-based network inference from time series data	116
3.5	Inference of PBNs from Time Series Data	119
3.5.1	Splitting the temporal data sequence into pure subsequences	120
3.5.2	Estimation of switching, selection, and perturbation probabilities	121
3.6	Validation of network inference procedures	122
4	Structural Intervention	125
4.1	Impact of Function Perturbation on State Transitions	126
4.1.1	Identifying function perturbations	129
4.2	Intervention via Constructive Function Perturbation	131
4.2.1	Concept of structural intervention	131
4.2.2	Method for constructive function-based intervention	133
4.2.3	Intervention in a WNT5A network	134
4.3	Impact of Structural Perturbation on the Steady-State Distribution	136
4.3.1	Rank-one perturbations	138
4.3.2	Perturbation in the same row	142
4.3.3	Extension to multiple rows by iterative computation	143
4.3.4	Application to PBNs	143
4.4	Structural Intervention via Markov Chain Perturbation Theory	145
4.4.1	A WNT5A BN	146
4.5	Long-Run Sensitivity	148
4.5.1	Long-run sensitivity with respect to probabilistic parameters	148
4.5.2	Long-run sensitivity with respect to regulatory functions	150
4.5.3	One-predictor function perturbations	151
4.5.4	One-bit function perturbations	153
4.5.5	Function perturbations considering one-gene regulation	153
4.5.6	Properties of long-run sensitivity	154
4.5.7	Sensitivity and robustness of control	155
4.5.8	Sensitivity in a mammalian cell-cycle network	156
5	External Control	161
5.1	Intervention via One-Time Gene Perturbation	161
5.2	Finite-Horizon Control	165
5.2.1	Control problem	165
5.2.2	Solution by dynamic programming	167
5.2.3	Illustrative example	168
5.2.4	Finite-horizon control in a melanoma network	170
5.3	Infinite-Horizon Control	171
5.3.1	Optimal control solution: Discounted and bounded cost per stage	173
5.3.2	Optimal control solution: Average cost per stage	178
5.3.3	Infinite-horizon control for a WNT5A network	181
5.4	Approximation	183
5.4.1	A linear model	183
5.4.2	Intervention in a family of BNs	184

Contents	ix
<hr/>	
5.4.3 Imperfect information	185
5.4.4 Reduction of a context-sensitive PBN	187
5.4.5 Reinforcement learning	191
5.5 Constrained Intervention	194
5.5.1 Constrained intervention in a mammalian cell-cycle network . . .	199
5.5.2 Cyclic intervention	204
5.6 Robust Control	205
5.6.1 Perturbation bounds	206
5.6.2 Minimax robust control	208
5.6.3 Bayesian robust control	211
5.6.4 Uncertainty in the switching probabilities	212
5.7 Adaptive Infinite-Horizon Control	215
5.8 Mean-First-Passage-Time Stationary Control	216
5.8.1 Model-free intervention	218
5.9 Steady-State-Based Control Policies	221
5.9.1 Steady-state-distribution greedy control policy	221
5.9.2 Conservative steady-state-distribution control policy	222
5.9.3 Performance comparison	224
6 Asynchronous Networks	227
6.1 Asynchronous PBNs	227
6.1.1 Deterministic asynchronous PBNs	227
6.1.2 Semi-Markov asynchronous PBNs	229
6.2 Intervention in Asynchronous Networks	232
6.2.1 Intervention in DA-PBNs	232
6.2.2 Intervention in SMA-PBNs	234
6.2.3 Solution for three intertransition interval distributions	238
6.2.4 Intervention in a mutated mammalian cell-cycle SMA-PBN	239
Bibliography	243
Index	261
