Preface	vii
Introduction	ix
Notation and Symbols	xiii
1 Polynomials	1
1.1 Monomial Form	1
1.2 Taylor Approximation	3
1.3 Interpolation	5
1.4 Bernstein Polynomials	9
1.5 Properties of Bernstein Polynomials	11
1.6 Hermite Interpolant	14
1.7 Approximation of Continuous Functions	16
2 Bézier Curves	19
2.1 Control Polygon	19
2.2 Properties of Bézier Curves	22
2.3 Algorithm of de Casteljau	25
2.4 Differentiation	27
2.5 Curvature	29
2.6 Subdivision	31
2.7 Geometric Hermite Interpolation	33
3 Rational Bézier Curves	37
3.1 Control Polygon and Weights	37
3.2 Basic Properties	39
3.3 Algorithms	42
3.4 Conic Sections	45
4 B-Splines	51
4.1 Recurrence Relation	51
4.2 Differentiation	55
4.3 Representation of Polynomials	59
4.4 Splines	61
4.5 Evaluation and Differentiation	68
4.6 Periodic Splines	73

5	Approximation	77
5.1	Schoenberg's Scheme	77
5.2	Quasi-Interpolation	81
5.3	Accuracy of Quasi-Interpolation	85
5.4	Stability	88
5.5	Interpolation	90
5.6	Smoothing	97
6	Spline Curves	105
6.1	Control Polygon	105
6.2	Basic Properties	110
6.3	Refinement	115
6.4	Algorithms	125
6.5	Interpolation	130
7	Multivariate Splines	133
7.1	Polynomials	133
7.2	Polynomial Approximation	136
7.3	Splines	138
7.4	Algorithms	142
7.5	Approximation Methods	145
7.6	Hierarchical Bases	150
8	Surfaces and Solids	155
8.1	Bézier Surfaces	155
8.2	Spline Surfaces	160
8.3	Subdivision Surfaces	164
8.4	Blending	166
8.5	Solids	169
9	Finite Elements	173
9.1	Ritz-Galerkin Approximation	173
9.2	Weighted B-Splines	177
9.3	Isogeometric Elements	180
9.4	Implementation	183
9.5	Applications	187
	Notes and Comments	193
	Appendix	197
	Bibliography	205
	Index	213
