Introduction	ix
0.1 Getting Started	ix
0.2 Using a Reference Book	x
0.3 Become Familiar with the New	x
0.4 Moving to Interesting Topics	xi
1 The Modern Fortran Source	1
1.1 Introduction	1
1.2 Source Code Formatting and Labels	2
1.3 Comments in Source Code	2
1.4 Continuation Lines	3
1.5 Statements Separated by ‘;’	4
1.6 Relational Operators and Related Symbols	4
1.7 Introducing Derived Types	5
1.8 Basics on Modules	6
1.9 Optional Arguments	8
1.10 The Include Line and Preprocessor Directives	9
1.11 New Timing Routines	10
2 Modules for Subprogram Libraries	13
2.1 Introduction	13
2.2 Running a Fortran 77 Program	14
2.3 Develop with Modules	19
3 Generic Subprograms	29
3.1 Introduction	29
3.2 Illustrations with Airy Functions	30
3.3 Writing the Module Procedures	31
4 Sparse Matrices, Defined Operations, Overloaded Assignment	35
4.1 Introduction	35
4.2 Representing Sparse Matrices	36
4.3 A Simple Sparse Representation	37
4.4 Overloaded Assignment	39

4.5	User-Defined and Overloaded Operators	42
4.6	Sums and Transposes of Sparse Matrices	42
4.7	Sparse Matrix, Dense Vector/Matrix Products	45
4.8	Documentation and Error Processing	45
5	Object-Oriented Programming for Numerical Applications	47
5.1	Introduction	47
5.2	Inheritance and Polymorphism	49
5.3	Encapsulation	50
5.4	Using Classes for Passing Information to User-Written Routines	51
5.5	Summary	55
6	Recursion in Fortran	57
6.1	Introduction	57
6.2	Basic Quicksort	58
6.3	Generalizing Using Type-Bound Procedures	63
6.4	Using Abstract Data Types and Interfaces	66
6.5	Efficiency Considerations	69
7	Case Study: Toward A Modern QUADPACK Routine	71
7.1	Introduction	71
7.2	Converting Source Form	74
7.3	Transformed Interface	74
7.4	A One-Dimensional Integration with User Data	77
7.5	Two-Dimensional Integration Using Extended Types and Recursion	81
7.6	A Complex Line Integral	85
8	Case Study: Documenting the Quadrature Routine qag2003	89
8.1	Introduction	89
8.2	The PUBLIC Symbols and Base Class	90
8.3	The Arguments for qag2003	92
8.4	Example: Three Ways to Package the User Function	94
8.5	Documenting Internal Working Variables	98
9	IEEE Arithmetic Features and Exception Handling	101
9.1	Introduction	101
9.2	Example Problem	103
9.3	Using the IEEE Features from Fortran	107
9.4	Denormalized Numbers and Underflow Modes	113
10	Interoperability with C	117
10.1	Introduction	117
10.2	Characters and Two-Dimensional Arrays	121
10.3	Sharing Data Structures and Global Data	124
10.4	Function Pointers	125

10.5	System Calls	127
10.6	Some Names Are Still Not Allowed	129
11	Defined Operations for Sparse Matrix Solutions	131
11.1	Introduction	131
11.2	Ascended Harwell–Boeing Sparse Matrices	132
11.3	C Wrappers Calling SuperLU Functions	134
11.4	The Overloaded Assignments and Defined Operators	137
12	Case Study: Two Sparse Least-Squares System Examples	141
12.1	Introduction	141
12.2	Data Fitting with Continuous Linear Splines	141
12.3	Airy’s Equation with Boundary Values	145
13	Message Passing with MPI in Standard Fortran	151
13.1	Introduction	151
13.2	Two Examples	152
13.3	MPI Implementations	153
13.4	Fortran Standard Code Violations	157
13.5	A Core Suite	158
14	Coarrays in Standard Fortran	163
14.1	Introduction	163
14.2	A Core Suite of Coarray Intrinsic Functions	164
14.3	A Coarray Alternative for Computing π	166
14.4	Matrix-Vector Products Using Coarrays	167
15	OpenMP in Fortran	169
15.1	Introduction	169
15.2	Examples	171
15.3	Tips on Writing Thread-Safe Routines	176
15.4	A Mention of More General Threading Models	180
16	Modifying Source to Remove Obsolescent or Deleted Features	181
16.1	Introduction	181
16.2	On Replacing Obsolescent Features	182
16.3	On Replacing Deleted Features	187
16.4	On the Removal of GO TO Statements	187
17	Software Testing	193
17.1	Introduction	193
17.2	What Constitutes a Test?	194
17.3	When to Start and Stop Testing	194
17.4	Other Types of Testing	196
17.5	Problems with Constructing Test Data	198
17.6	Equivalence Partitioning and Boundary Value Analysis	198
17.7	Final Word	202

18	Compilers	205
18.1	Introduction	205
18.2	Commonly Available Checks and Options	206
18.3	Other Useful Commonly Available Options	208
18.4	Optimization	209
18.5	My Code Doesn't Run Fast Enough!	212
18.6	Dealing with Dusty Decks	212
19	Software Tools	215
19.1	Introduction	215
19.2	Application Building Using <i>make</i>	216
19.3	Source Code or Text Control Systems	219
19.4	Source Code Documentation Systems	219
19.5	Debuggers	220
19.6	Profiling	221
19.7	Sample Output and Run-Time Error Processors	222
19.8	Source Code Stylers	223
19.9	Other Software Tools	225
20	Fortran Book Code on SIAM Web Site	227
20.1	Downloading the Software	227
20.2	Topical Headings for the Software	227
	Bibliography	231
	Index	239
