Preface	vii
1 Essentials of linear algebra	1
1.1 Solving linear systems	2
1.2 Vector algebra and matrix/vector multiplication	12
1.3 Matrix algebra: Addition, subtraction, and multiplication	18
1.4 Matrix algebra: The inverse of a square matrix	20
1.5 The structure of the solution	23
1.6 Sets of linear combinations of vectors	29
1.7 Subspaces	40
1.8 Basis and dimension	46
1.9 Equivalence results	55
1.10 The determinant of a square matrix	60
1.11 Linear algebra with complex-valued numbers, vectors, and matrices	65
1.12 Eigenvalues and eigenvectors	71
1.13 Case studies	85
Group projects	97
2 Scalar first-order linear differential equations	101
2.1 Motivating problems	101
2.2 General theory	104
2.3 The structure of the solution	111
2.4 The homogeneous solution	115
2.5 The particular and general solution	116
2.6 Case studies	126
Group projects	133
3 Systems of first-order linear differential equations	135
3.1 Motivating problems	135
3.2 Scalar equations and equivalent systems	142
3.3 Existence and uniqueness theory	144
3.4 The structure of the solution	144
3.5 The homogeneous solution	149
3.6 The particular solution	175
3.7 Case studies	183
Group projects	197

4	Scalar higher-order linear differential equations	201
4.1	The homogeneous solution	202
4.2	The particular solution	209
4.3	Case studies	218
	Group projects	233
5	Discontinuous forcing and the Laplace transform	237
5.1	The Heaviside (unit) step function and the (Dirac) delta function	237
5.2	The Laplace transform	240
5.3	Application: Solving second-order scalar ODEs	247
5.4	Case studies	251
5.5	The transfer function, convolutions, and variation of parameters	261
	Group projects	269
6	Odds and ends	273
6.1	Separation of variables	273
6.2	Nonlinear scalar autonomous ODEs and the phase line	276
6.3	Case studies	279
6.4	Power series solutions	283
6.5	Case studies	287
	Bibliography	295
	Index	299
