List of Contributors	xi
List of Figures	xiii
Preface	xv
1 Introduction	1
<i>M. R. Kosorok, E. E. M. Moodie</i>	
1.1 Book structure and connections between chapters	2
1.2 Towards a comprehensive framework for discovering dynamic treatment regimes	3
1.3 Conclusion	4
I Design of Trials for Estimating Dynamic Treatment Regimes	5
2 DTRs and SMARTs: Definitions, designs, and applications	7
<i>K. M. Kidwell</i>	
2.1 Introduction to dynamic treatment regimes	7
2.2 Potential outcomes framework	10
2.3 Modes of constructing, estimating, or comparing dynamic treatment regimes	12
2.4 SMART designs	14
2.5 Conclusion	23
3 Efficient design for clinically relevant intent-to-treat comparisons	25
<i>R. Dawson, P. W. Lavori</i>	
3.1 Introduction	25
3.2 Design framework	27
3.3 Efficient inference for SMART designs	27
3.4 Sample size calculations for efficient inference	30
3.5 Samples size calculations for selecting the best DTR	36
3.6 Consideration of secondary analyses	37
3.7 Discussion	39
4 SMART design, conduct, and analysis in oncology	41
<i>P. F. Thall</i>	
4.1 Introduction	41
4.2 Dynamic treatment regimes in oncology	42

4.3	Why use SMART designs?	44
4.4	A trial in advanced prostate cancer	47
4.5	A trial in metastatic kidney cancer	51
4.6	Discussion	53
5	Sample size calculations for clustered SMART designs	55
	<i>P. Ghosh, Y. K. Cheung, B. Chakraborty</i>	
5.1	Introduction	55
5.2	Primary analysis and sample size calculation for nonclustered SMART	57
5.3	SMART designs for clustered data: Primary analysis and sample size calculation	60
5.4	Pilot SMARTs for clustered data	62
5.5	Simulation study	63
5.6	Discussion	68
II	Practical Challenges in Dynamic Treatment Regime Analyses	71
6	Analysis in the single-stage setting: An overview of estimation approaches for dynamic treatment regimes	73
	<i>M. P. Wallace, E. E. M. Moodie</i>	
6.1	Introduction	73
6.2	Some important concepts	74
6.3	Basic regression	75
6.4	G-estimation	77
6.5	Comparing multiple regimes: Marginal structural modeling	79
6.6	Augmented inverse probability of treatment weighting	81
6.7	Classification approaches: Outcome weighted learning	82
6.8	Example: Comparing methods	84
6.9	Summary	86
7	G-estimation for dynamic treatment regimes in the longitudinal setting	89
	<i>D. A. Stephens</i>	
7.1	The origins of G-estimation in semiparametric regression	89
7.2	G-estimation for multiple intervals: The structural nested mean model	95
7.3	Optimal treatment regimes via G-estimation	97
7.4	Inferential challenges	102
7.5	Illustrations and simulation study	103
7.6	Summary and discussion	115
8	Outcome weighted learning methods for optimal dynamic treatment regimes	119
	<i>Y. Q. Zhao</i>	
8.1	Introduction	119
8.2	Outcome weighted learning for single-stage setting	120
8.3	Backward and simultaneous outcome weighted learning for the mul- tistage setting	127
8.4	Conclusion	134

9	Value search estimators for optimal dynamic treatment regimes	135
	<i>M. Davidian, A. A. Tsiatis, E. B. Laber</i>	
9.1	Introduction	135
9.2	Potential outcomes framework	136
9.3	Observed data	140
9.4	Value search estimators for a single stage	144
9.5	Value search estimators for multiple stages	149
9.6	Discussion	154
10	Evaluation of longitudinal dynamic regimes with and without marginal structural working models	157
	<i>M. Petersen, J. Schwab, E. Geng, M. J. van der Laan</i>	
10.1	Introduction	157
10.2	The ADAPT-R trial	159
10.3	Observed data and statistical model	160
10.4	Causal parameters of interest	162
10.5	Identification	170
10.6	Estimation	171
10.7	Discussion	177
10.8	Appendix: Data generating process	180
10.9	Appendix: R code	180
10.10	Appendix: Inference for expected outcome under the optimal regime	180
11	Imputation strategy for SMARTs	187
	<i>S. M. Shortreed, E. B. Laber, J. Pineau, S. A. Murphy</i>	
11.1	Challenges in imputing missing data from SMARTs	188
11.2	Imputation methods	192
11.3	Imputing missing data from the CATIE schizophrenia trial	195
11.4	Assessing the CATIE imputations	198
11.5	Conclusion	202
12	Clinical trials for personalized dose finding	205
	<i>G. Chen, D. Zeng</i>	
12.1	Introduction	205
12.2	Personalized dose finding in a single stage trial	206
12.3	Personalized dose finding in a multiple-stage trial	209
12.4	Discussion	211
13	Methods for analyzing DTRs with censored survival data	213
	<i>G. S. Johnson, A. Topp, A. S. Wabed</i>	
13.1	Estimating the effect of a DTR on overall survival	214
13.2	Testing survival probabilities across DTRs	227
13.3	Discussion	235
14	Outcome weighted learning with a reject option	239
	<i>M. Yuan</i>	
14.1	Introduction	239
14.2	Outcome weighted learning	240
14.3	Infinite sample consistency	242
14.4	Risk bounds	244
14.5	Summary	247

15	Estimation of dynamic treatment regimes for complex outcomes: Balancing benefits and risks	249
	<i>K. A. Linn, E. B. Laber, L. A. Stefanski</i>	
15.1	Introduction	249
15.2	Optimal constrained treatment regimes	250
15.3	Toy example	257
15.4	Future work	260
15.5	Appendix: List of notation	260
16	Practical reinforcement learning in dynamic treatment regimes	263
	<i>R. D. Vincent, J. Pineau, N. Ybarra, I. El Naqa</i>	
16.1	Introduction	263
16.2	Reinforcement learning	263
16.3	Developing a dynamic treatment regime using RL	270
16.4	Case study: Optimizing adaptive radiation fractionation using RL	278
16.5	Discussion	291
16.6	Summary and conclusion	296
17	Reinforcement learning applications in clinical trials	297
	<i>Y. F. Zhao</i>	
17.1	Introduction	297
17.2	Reinforcement learning and Q-learning	298
17.3	Case studies	306
17.4	Future research	314
	Bibliography	317
	Index	347
