Preface vii

1 Introduction 1

2 Linear Elliptic Partial Differential Equations 7
- 2.1 Function spaces 7
- 2.2 Setting of the problem: Classical and weak formulation 9
- 2.3 Norms equivalent to $\|\cdot\|_{H^1}$: Friedrichs and Poincaré inequalities . . 15
- 2.4 On (u, q) formulation and other possible generalizations 19

3 Elements of Functional Analysis 23
- 3.1 Riesz representation theorem 23
- 3.2 Functional equations and bilinear forms 25
- 3.3 Lax–Milgram lemma 26

4 Riesz Map and Operator Preconditioning 29

5 Conjugate Gradient Method in Hilbert Spaces 35
- 5.1 Algorithmic construction of CG 36
- 5.2 Analytic moment matching model reduction description of CG . . . 42

6 Finite-Dimensional Hilbert Spaces and the Matrix Formulation of the Conjugate Gradient Method 47

7 Comments on the Galerkin Discretization 53

8 Preconditioning of the Algebraic System as Transformation of the Discretization Basis 55

9 Fundamental Theorem on Discretization 63

10 Local and Global Information in Discretization and in Computation 69

11 Limits of the Condition Number–Based Descriptions 73

12 Inexact Computations, A Posteriori Error Analysis, and Stopping Criteria 77

13 Summary and Outlook 81

Bibliography 85

Index 101
