

## SIAM Conference on NONLINEAR WAVES and COHERENT STRUCTURES

**JUNE 11-14, 2018**

DoubleTree by Hilton Hotel  
Anaheim – Orange County  
Orange, California, USA

*Sponsored by the SIAM Activity Group on Nonlinear Waves & Coherent Structures (NWCS)*

The Activity Group on Nonlinear Waves & Coherent Structures (NWCS) fosters collaborations among applied mathematicians, physicists, fluid dynamicists, engineers, and biologists in those areas of research related to the theory, development, and use of nonlinear waves and coherent structures.

It promotes and facilitates nonlinear waves and coherent structures as an academic discipline; brokers partnerships between academia, industry, and government laboratories; and works with other professional societies to promote NWCS.

The activity group organizes the biennial SIAM Conference on Nonlinear Waves & Coherent Structures; awards The Martin Kruskal Lecture every two years to recognize a notable body of mathematics and contributions in the field of nonlinear waves and coherent structures; awards the T. Brooke Benjamin Prize in Nonlinear Waves every two years to a mid-career established researcher for recent outstanding work on a topic in nonlinear waves; and maintains a member directory and an electronic mailing list.

## Organizing Committee Co-Chairs

**Mathew Johnson**  
University of Kansas, USA

**Todd Kapitula**  
Calvin College, USA

## Organizing Committee

**Andrea Barreiro**  
Southern Methodist University, USA

**Andrea Bertozzi**  
University of California Los Angeles, USA

**Gianne Derks**  
University of Surrey, United Kingdom

**Christopher K. R. T. Jones**  
University of North Carolina at Chapel Hill,  
USA

**Henrik Kalisch**  
University of Bergen, Norway

**Jason Metcalfe**  
University of North Carolina at Chapel Hill,  
USA

**Benjamin Seibold**  
Temple University, USA

**Thomas Trogdon**  
University of California, Irvine, USA

**Vlad Vicol**  
Princeton University, USA

### Rudy Horne

Morehouse College, USA  
We are sad to report the recent passing of  
Organizing Committee Member Rudy Horne,  
Morehouse College, USA. An obituary is available  
at [http://www.morehouse.edu/newscenter/  
morehousecollegemournsthe loss of rudyhorne.html](http://www.morehouse.edu/newscenter/morehousecollegemournsthe loss of rudyhorne.html)

## Conference Themes

### Nonlinear Waves and Coherent Structures in:

Fluids  
Optics, Photonics & Bose Einstein  
Condensates  
Biological Systems  
Social Sciences  
Climate and Geosciences  
Traffic  
Ocean Engineering  
Astrophysics & Cosmology  
Stochastic Systems

### Emphasizing Methods of:

Stability Analysis, Spectral Theory, &  
Geometric Analysis  
Scientific Computing  
Integrable Systems  
Harmonic Analysis  
Asymptotic Analysis

## SIAM Registration Desk

The SIAM registration desk is located in  
the Malibu room on the Main Floor. It is  
open during the following hours:

Sunday, June 10  
5:00 PM - 7:00 PM

Monday, June 11  
7:30 AM - 3:30 PM

Tuesday, June 12  
8:15 AM - 3:30 PM

Wednesday, June 13  
8:15 AM - 3:30 PM

Thursday, June 14  
8:15 AM - 3:30 PM

## Hotel Address

DoubleTree by Hilton Hotel Anaheim -  
Orange County  
100 The City Drive  
Orange, California, 92868-3204  
USA

Phone Number: +1-714-634-4500  
Hotel website: <http://doubletree3.hilton.com/en/hotels/california/doubletree-by-hilton-hotel-anaheim-orange-county-SNACCDT/index.html>

## Hotel Telephone Number

To reach an attendee or leave a message,  
call +1-714-634-4500. If the attendee  
is a hotel guest, the hotel operator can  
connect you with the attendee's room.

## Hotel Check-in and Check-out Times

Check-in time is 3:00 PM.  
Check-out time is 12:00 PM.

## Child Care

Visit [www.care.com](http://www.care.com) for information on  
child care services. Care.com provides  
a web-based resource to connect  
individuals with vetted babysitters and  
nannies. Attendees are responsible  
for making their own child care  
arrangements.

## Corporate Members and Affiliates

SIAM corporate members provide  
their employees with knowledge about,  
access to, and contacts in the applied  
mathematics and computational sciences  
community through their membership  
benefits. Corporate membership is more  
than just a bundle of tangible products  
and services; it is an expression of  
support for SIAM and its programs.  
SIAM is pleased to acknowledge its  
corporate members and sponsors. In  
recognition of their support, non-  
member attendees who are employed by  
the following organizations are entitled  
to the SIAM member registration rate.

## Corporate/Institutional Members

The Aerospace Corporation  
 Air Force Office of Scientific Research  
 Amazon  
 Aramco Services Company  
 Bechtel Marine Propulsion Laboratory  
 The Boeing Company  
 CEA/DAM  
 Department of National Defence (DND/CSEC)  
 DSTO- Defence Science and Technology Organisation  
 Exxon Mobil  
 Hewlett-Packard  
 Huawei FRC French R&D Center  
 IBM Corporation  
 IDA Center for Communications Research, La Jolla  
 IDA Center for Communications Research, Princeton  
 IFP Energies nouvelles  
 Institute for Defense Analyses, Center for Computing Sciences  
 Lawrence Berkeley National Laboratory  
 Lawrence Livermore National Labs  
 Lockheed Martin  
 Los Alamos National Laboratory  
 Max-Planck-Institute for Dynamics of Complex Technical Systems  
 Mentor Graphics  
 National Institute of Standards and Technology (NIST)  
 National Security Agency (DIRNSA)  
 Naval PostGrad  
 Oak Ridge National Laboratory, managed by UT-Battelle for the Department of Energy  
 Sandia National Laboratories  
 Schlumberger-Doll Research  
 United States Department of Energy  
 U.S. Army Corps of Engineers, Engineer Research and Development Center  
 US Naval Research Labs

## Funding Agency

SIAM and the conference organizing committee wish to extend their thanks and appreciation to the U.S. National Science Foundation for its support of this conference.

## Join SIAM and save!

### *Leading the applied mathematics community . . .*

SIAM members save up to \$140 on full registration for the SIAM Conference on Nonlinear Waves and Coherent Structures (NWCS18). Join your peers in supporting the premier professional society for applied mathematicians and computational scientists. SIAM members receive subscriptions to *SIAM Review*, *SIAM News* and *SIAM Unwrapped*, and enjoy substantial discounts on SIAM books, journal subscriptions, and conference registrations.

If you are not a SIAM member and paid the *Non-Member* or *Non-Member Mini Speaker/Organizer* rate to attend the conference, you can apply the difference between what you paid and what a member would have paid (\$140 for a *Non-Member* and \$70 for a *Non-Member Mini Speaker/Organizer*) towards a SIAM membership. Contact SIAM Customer Service for details or join at the conference registration desk.

If you are a SIAM member, it only costs \$15 to join the SIAM Activity Group on Nonlinear Waves and Coherent Structures. As a SIAG/NWCS member, you are eligible for an additional \$15 discount on this conference, so if you paid the SIAM member rate to attend the conference, you might be eligible for a free SIAG/NWCS membership. Check at the registration desk.

Free Student Memberships are available to students who attend an institution that is an Academic Member of SIAM, are members of Student Chapters of SIAM, or are nominated by a Regular Member of SIAM.

Join onsite at the registration desk, go to [www.siam.org/joinsiam](http://www.siam.org/joinsiam) to join online or download an application form, or contact SIAM Customer Service:

Telephone: +1-215-382-9800 (worldwide); or 800-447-7426 (U.S. and Canada only)

Fax: +1-215-386-7999

E-mail: [membership@siam.org](mailto:membership@siam.org)

## Standard Audio-Visual Set-Up in Meeting Rooms

SIAM does not provide computers for any speaker. When giving an electronic presentation, speakers must provide their own computers. SIAM is not responsible for the safety and security of speakers' computers.

A data (LCD) projector and screen will be provided in all technical session meeting rooms. The data projectors support both VGA and HDMI connections. Presenters requiring an alternate connection must provide their own adaptor.

## Internet Access

Attendees booked within the SIAM room block will receive complimentary wireless Internet access in their guest rooms and the public areas of the hotel. All conference attendees will have complimentary wireless Internet access in the meeting space.

SIAM will also provide a limited number of email stations.

## Job Postings

Please check with the SIAM registration desk regarding the availability of job postings or visit <http://jobs.siam.org>.

## Registration Fee Includes

- Admission to all technical sessions
- Business Meeting (*open to SIAG/NWCS members*)
- Coffee breaks daily
- Room set-ups and audio/visual equipment
- Welcome Reception and Poster Session

## Poster Participant Information

The poster session is scheduled for Tuesday, June 12 from 5:15 PM – 7:15 PM. Poster presenters must set-up their poster material on the 4' x 8' poster boards in the Huntington/Manhattan Room on the Main Floor after 3:00 PM on Monday, June 11. All materials must be posted by Tuesday, June 12 at 5:15 PM, the official start time of the session. Posters will remain on display through 10:00 AM on Thursday, June 14. **Posters must be removed by 10:00 AM on Thursday, June 14.**

## Table Top Display

SIAM

## Name Badges

A space for emergency contact information is provided on the back of your name badge. Help us help you in the event of an emergency!

## Comments?

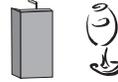

Comments about SIAM meetings are encouraged! Please send to: Cynthia Phillips, SIAM Vice President for Programs ([vpp@siam.org](mailto:vpp@siam.org)).

## Get-togethers

Welcome Reception and Poster Session  
Tuesday, June 12  
5:15 PM - 7:15 PM

Business Meeting  
(*open to SIAG/NWCS members*)  
Wednesday, June 13  
6:30 PM - 7:15 PM  
*Complimentary beer and wine will be served.*

## Statement on Inclusiveness

As a professional society, SIAM is committed to providing an inclusive climate that encourages the open expression and exchange of ideas, that is free from all forms of discrimination, harassment, and retaliation, and that is welcoming and comfortable to all members and to those who participate in its activities. In pursuit of that commitment, SIAM is dedicated to the philosophy of equality of opportunity and treatment for all participants regardless of gender, gender identity or expression, sexual orientation, race, color, national or ethnic origin, religion or religious belief, age, marital status, disabilities, veteran status, field of expertise, or any other reason not related to scientific merit. This philosophy extends from SIAM conferences, to its publications, and to its governing structures and bodies. We expect all members of SIAM and participants in SIAM activities to work towards this commitment.

## Please Note

SIAM is not responsible for the safety and security of attendees' computers. Do not leave your personal electronic devices unattended. Please remember to turn off your cell phones and other devices during sessions.

## Recording of Presentations

Audio and video recording of presentations at SIAM meetings is prohibited without the written permission of the presenter and SIAM.

## Social Media

SIAM is promoting the use of social media, such as Facebook and Twitter, in order to enhance scientific discussion at its meetings and enable attendees to connect with each other prior to, during and after conferences. If you are tweeting about a conference, please use the designated hashtag to enable other attendees to keep up with the Twitter conversation and to allow better archiving of our conference discussions. The hashtag for this meeting is #SIAMNWCS18.

SIAM's Twitter handle is @TheSIAMNews.

## Changes to the Printed Program

The printed program and abstracts were current at the time of printing, however, please review the online program schedule ([http://meetings.siam.org/program.cfm?CONF\\_CODE=nw18](http://meetings.siam.org/program.cfm?CONF_CODE=nw18)) for the most up-to-date information.

## Minitutorial

*The Minitutorial will take place in Redondo - Main Floor*

**Wednesday, June 13**

**3:00 PM - 5:00 PM**

**Organizer: Benjamin Seibold, Temple University, USA**

**MT1** Phantom Jams and Nonlinear Waves in Traffic Flow - Theory and Practice

## Invited Plenary Speakers

*All Invited Plenary Presentations will take place in Laguna/Newport - Main Floor*

### Monday, June 11

**8:45 AM - 9:30 AM**

**IP1** Amphiphilic Morphology: Lipids, Proteins, and Entropy

**Keith Promislow**, *Michigan State University, USA*

**1:45 PM - 2:30 PM**

**IP2** Pilot-wave Hydrodynamics: From Chaotic Dynamics to Quantum-like Statistics

**John W. Bush**, *Massachusetts Institute of Technology, USA*

### Tuesday, June 12

**8:45 AM - 9:30 AM**

**IP3** Partial Differential Equations as Models for Social Complex Systems

**Nancy Rodriguez-Bunn**, *University of North Carolina at Chapel Hill, USA*

**1:45 PM - 2:30 PM**

**IP4** On the Way to the Limit:

Oscillatory Stiffness and Low Frequency Dynamics in Climate and Weather Prediction

**Beth Wingate**, *University of Exeter, United Kingdom*

## Invited Plenary Speakers

*All Invited Plenary Presentations will take place in Laguna/Newport - Main Floor*

### Wednesday, June 13

**8:45 AM - 9:30 AM**

**IP5** Multi-scale Problems of Material Design in Sustainable Energies

**Barbara Wagner**, *Weierstrass Institute, Germany*

**1:45 PM - 2:30 PM**

**IP6** Nonlinear Geometric Optics and Applications  
to Stable Singularity Formation

**Jared Speck**, *Massachusetts Institute of Technology, USA*

### Thursday, June 14

**8:45 AM - 9:30 AM**

**IP7** The Rainbow of Spatio-temporal Dynamics in Nonlinear Optics:  
The Story of Multi-color Light Filaments, Vortices and Other Patterns  
and the Mathematics Behind It

**Alejandro Aceves**, *Southern Methodist University, USA*

**1:45 PM - 2:30 PM**

**IP8** Propagating Waves in Nonlocal Neural Media

**G. Bard Ermentrout**, *University of Pittsburgh, USA*

## Prize and Special Lecture

### **Martin Kruskal Prize Recipient**

**Michael I. Weinstein**, *Columbia University, USA*

### **T. Brooke Benjamin Prize in Nonlinear Waves Recipient**

**David M. Ambrose**, *Drexel University, USA*

**Monday, June 11**

**5:15 PM - 5:30 PM**

Martin D. Kruskal Prize and T. Brooke Benjamin Prize  
in Nonlinear Waves Award Presentations

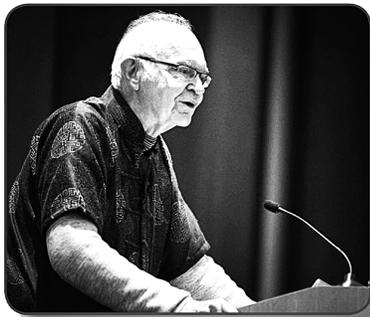

**5:30 PM - 6:15 PM**

**SP1** Martin D. Kruskal Prize Lecture –  
On the Mathematical Theory of Graphene and its Artificial Analogues

**Michael I. Weinstein**, *Columbia University, USA*

**SIAM PRESENTS IS AN AUDIO-VISUAL ARCHIVE  
 COMPRISED OF MORE THAN 2,000 PRESENTATIONS  
 POSTED IN OVER 40 SEARCHABLE TOPICS, INCLUDING:**

- algebraic geometry
- atmospheric and oceanographic science
- computational science
- data mining
- geophysical science
- optimization
- uncertainty quantification and more...

The collection, *Featured Lectures from our Archives*, includes audio and slides from more than 30 conferences since 2008, including talks by invited and prize speakers, select minisymposia, and minitutorials. Presentations from SIAM meetings are being added throughout the year.

In addition you can view short video clips of speaker interviews from sessions at Annual Meetings starting in 2010.

Plans for adding more content are on the horizon. Keep an eye out!

The audio, slide, and video presentations are part of SIAM's outreach activities to increase the public's awareness of mathematics and computational science in the real world, and to bring attention to exciting and valuable work being done in the field. Funding from SIAM, the National Science Foundation, and the Department of Energy was used to partially support this project.

New presentations are posted every few months as the program expands with sessions from additional SIAM meetings. Users can search for presentations by category, speaker name, and/or key words.

[www.siam.org/meetings/presents.php](http://www.siam.org/meetings/presents.php)

SOCIETY FOR INDUSTRIAL AND APPLIED MATHEMATICS • 3600 MARKET STREET, 6TH FLOOR • PHILADELPHIA, PA 19104-2688 USA

# SIAM Activity Group on Nonlinear Waves & Coherent Structures (SIAG/NWCS)

[www.siam.org/activity/nwcs](http://www.siam.org/activity/nwcs)

## A GREAT WAY TO GET INVOLVED!

*Collaborate and interact with mathematicians and applied scientists whose work involves Nonlinear Waves and Coherent Structures*

### ACTIVITIES INCLUDE:

- Special Sessions at SIAM meetings
- Biennial conference
- The T. Brooke Benjamin Prize in Nonlinear Waves (awarded biennially)

### BENEFITS OF SIAG/NWCS MEMBERSHIP:

- Listing in the SIAG's online membership directory
- Additional \$15 discount on registration at the SIAM Conference on Nonlinear Waves and Coherent Structures
- Electronic communications about recent developments in your specialty
- Eligibility for candidacy for SIAG/NWCS office
- Participation in the selection of SIAG/NWCS officers

### ELIGIBILITY:

- Be a current SIAM member.

### COST:

- \$15 per year
- Student members can join 2 activity groups for free!

**SIAM Conference on  
NONLINEAR WAVES  
and COHERENT STRUCTURES**

**JUNE 11-14, 2018**

DoubleTree by Hilton Hotel  
Anaheim – Orange County  
Orange, California, USA

### 2017-18 SIAG/NWCS OFFICERS

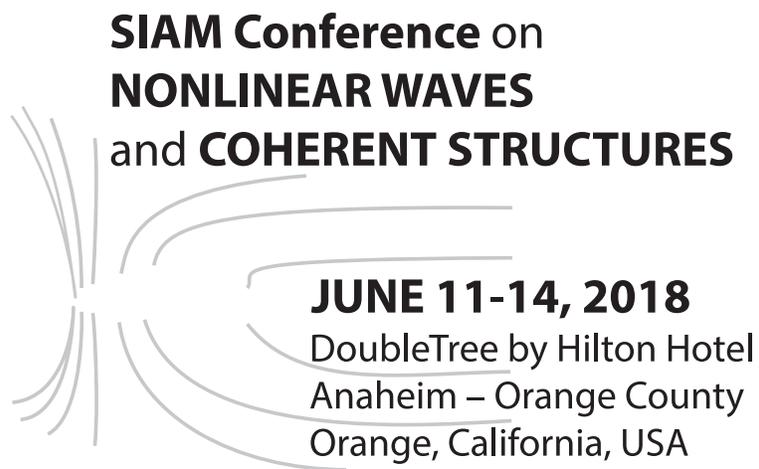

Chair: : Peter Miller, University of Michigan  
 Vice Chair: Jay Wright, Drexel University  
 Program Director: Todd Kapitula, Calvin College  
 Secretary: Katie Oliveras, Seattle University

### TO JOIN:

SIAG/NWCS: [my.siam.org/forms/join\\_siag.htm](http://my.siam.org/forms/join_siag.htm)

SIAM: [www.siam.org/joinsiam](http://www.siam.org/joinsiam)

## Program Schedule

Gene Golub  
**g2s3**  
 2019  
 SIAM Summer School

**June 17-28, 2019**  
**Aussois, France**

## HIGH PERFORMANCE DATA ANALYTICS

The tenth Gene Golub SIAM Summer School will take place in France, at the Paul Langevin conference center in Aussois, in the French Alps.

The focus of the school will be on large-scale data analytics, which lies at the intersections of data analytics algorithms and high performance computing. Students will be introduced to problems in data analytics arising from both the machine learning and the scientific computing communities. The school will include perspectives from industry, such as Amazon, Google, and IBM, as well as from academic instructors.

Students will be exposed to “end-to-end” multidisciplinary topics, which span several traditionally disparate areas. The series of lectures will develop background on methods and algorithms for data analytics, approximation algorithms to deal with large volumes of data, languages and tools for implementing those algorithms on large scale computers, and data-driven applications from scientific computing and machine learning.

The summer school is being organized by Laura Grigori (Inria and Sorbonne University), Matthew Knepley (University at Buffalo) Olaf Schenk (Università della Svizzera Italiana), and Rich Vuduc (Georgia Institute of Technology).

The intended audience is intermediate graduate students (students with a Master’s degree, 2nd-3rd year Ph.D. students without an MS, or equivalent). Applicants selected to participate pay no registration fee. Funding for local accommodations and meal expenses will be available for all participants.

### Application deadline: February 1, 2019

As information becomes available on how to apply, it will be posted at:

**<http://www.siam.org/students/g2s3/>**

*Sponsored by SIAM through an endowment from the estate of Gene Golub.*

*For more information about prior summer schools and Professor Gene Golub go to*  
**<http://www.siam.org/students/g2s3/>**

Monday, June 11

**IP1****Amphiphilic Morphology:  
Lipids, Proteins, and Entropy**

8:45 AM-9:30 AM

*Room:Laguna/Newport - Main Floor**Chair: Todd Kapitula, Calvin College, USA*

The self organization of phospholipids into membranes is fundamental to the origin of life, allowing for protection of internal structure while necessitating machinery to open pores. Evolutionary pressure has designed a myriad of controls in the guise of surface proteins that adjust the entropy of the lipid-solvent interactions, raising and lower energy barriers to membrane fusion, budding, endocytosis, and inducing curvature vectors that encode for fenestration and helical structures. All of these actors orchestrate the delicate dynamics of the endoplasmic reticulum (ER) and associated Golgi apparatus, biology's original coherent structures. We embed the ER and its dynamics within an energy minimization problem whose coherent dynamics play out on a huge center-stable stage. We give an overview of the bifurcation structure, including a mechanism for the onset of morphological complexity observed in synthetic amphiphilic polymers, and describe the template ER problem: the evolution and budding of lipid droplets.

Keith Promislow

*Michigan State University, USA***Coffee Break**

9:30 AM-10:00 AM

*Room:Huntington/Manhattan - Main Floor*

Monday, June 11

## MS1

### Defects in Structured Systems: Modeling, Analysis, and Simulation - Part I of II

10:00 AM-12:00 PM

Room: *Laguna/Newport - Main Floor*

#### For Part 2 see MS7

Structured systems support patterns comprised of broad ranges of spatial frequencies and meta-stable defects that have long-lifetimes. Defects are often associated with emergent behavior, such as high frequency spatial instabilities that induce additional structure on a background pattern or may arise when systems pass transiently through instability. Defects encumber the physical system with obstacles that frustrate the relaxation to equilibrium or may lead to permanent morphological change. Defects pose many problems to model development, to analysis of temporal behavior and stability, and to effective numerical resolution. This minisymposium will present a diverse collection of talks that address the modeling, analysis, and simulation of defects in physical contexts arising from material science and biological systems.

Organizer: Qiliang Wu

*Ohio University, USA*

Organizer: Keith Promislow

*Michigan State University, USA*

#### 10:00-10:25 Defects in Two-fluid Models of Lipid Droplets

*Keith Promislow, Michigan State University, USA*

#### 10:30-10:55 Dynamics and Competition of Block Copolymer Aggregates

*Karl Glasner, University of Arizona, USA*

#### 11:00-11:25 A Phase Field Crystal Model for Active Binary Mixtures

*Francesco Alaimo and Axel Voigt, Technische Universität Dresden, Germany*

#### 11:30-11:55 Modelling Defect Structures and Pattern Formation in 2 Dimensional Materials and Heterostructures

*Ken Elder, Oakland University, USA*

Monday, June 11

## MS2

### Minisymposium in Honor of Rudy L. Horne

10:00 AM-12:00 PM

Room: *Hermosa - Main Floor*

This Minisymposium is dedicated to Dr. Rudy Horne (Morehouse College) who passed away last December. Dr. Horne was not only active in the field of nonlinear waves but also known for his role as a consultant in the movie "Hidden Figures". This session brings people together who share his passion for mathematics and science.

Organizer: Tobias Schaefer

*City University of New York, Staten Island, USA*

Organizer: Richard O. Moore

*New Jersey Institute of Technology, USA*

#### 10:00-10:25 Rudy Horne: The Mathematical Consultant of the Hidden Figures Movie

*Talitha Washington, Howard University, USA*

#### 10:30-10:55 Nonlinear Waves in a Number of Discrete Dynamical Lattices

*Nathaniel Whitaker, University of Massachusetts, Amherst, USA*

#### 11:00-11:25 Direct Numerical Simulation of Nonlinear Water Waves

*David Trubatch, Montclair State University, USA*

#### 11:30-11:55 Tsunami

*Harvey Segur, University of Colorado, USA*

Monday, June 11

## MS3

### Challenges in Mathematical Modeling, Analysis and Computation of Quantum Systems - Part I of II

10:00 AM-12:00 PM

Room: *Sunset - Main Floor*

#### For Part 2 see MS9

The dynamics of quantum systems have been the subject of intensive studies in recent years. The modeling, analysis and computation of interacting particles, Fermions or Bosons, in the quantum regime have offered valuable insight into the dispersion, nonlinearity and other properties of novel atomic systems and materials. The underlying models include aspects of density functional theory, Schrodinger-type and Dirac equations, as well as various mean-field theories. This area of research is rich in mathematical questions. This minisymposium aims to bring together experts who work in theoretical aspects of quantum systems. An objective is to identify challenging issues and generate interactions among specialists.

Organizer: Dionisios Margetis

*University of Maryland, College Park, USA*

Organizer: Jeremy L. Marzuola

*University of North Carolina, Chapel Hill, USA*

#### 10:00-10:25 Symmetry Breaking and Branching in Density Functional Theory Models

*Jeremy L. Marzuola, University of North Carolina, Chapel Hill, USA; Duo Song, University of California, San Diego, USA*

#### 10:30-10:55 Mean Field Limits of Large Quantum Systems in Equilibrium

*Mathieu Lewin, CNRS and University of Cergy-Pontoise, France*

*continued on next page*

**11:00-11:25 Band Degeneracies in 90-degree Rotationally Invariant, Periodic Schroedinger Operators**

*Rachael Keller*, Columbia University, USA;  
*Jeremy L. Marzuola*, University of North Carolina, Chapel Hill, USA; *Braxton Osting* and *Michael I. Weinstein*, Columbia University, USA

**11:30-11:55 Wave-packet Dynamics in Locally Periodic Media**

*Alexander Watson*, Duke University, USA;  
*Michael I. Weinstein*, Columbia University, USA; *Jianfeng Lu*, Duke University, USA

Monday, June 11

**MS4**

**Nonlinear Waves and Singularities in Hydrodynamics, Physics and Biology - Part I of III**

10:00 AM-12:00 PM

*Room: Redondo - Main Floor*

**For Part 2 see MS10**

We encounter waves in all areas of our everyday lives, from ripples on the surface of a cup of coffee and sound waves to the plasma excitations on the sun. Waves of finite amplitude require solutions beyond linear approximation by taking into account nonlinear effects. Examples of the corresponding phenomena can be observed in self-focusing of laser beams in nonlinear media, wave breaking in hydrodynamics and aggregation of bacterial colonies. The minisymposium is devoted to new advances in the theory of nonlinear waves and singularities demonstrating vividly the similarity of approaches in a broad spectrum of applications.

Organizer: *Alexander O. Korotkevich*

*University of New Mexico, USA and Russian Academy of Sciences, Russia*

Organizer: *Pavel M. Lushnikov*

*University of New Mexico, USA*

**10:00-10:25 Computing Quasi-periodic Water Waves**

*Jon Wilkening*, University of California, Berkeley, USA

**10:30-10:55 Loss of Phase and Universality of Stochastic Interactions Between Laser Beams**

*Gadi Fibich*, *Amir Sagiv*, and *Adi Ditkowski*, Tel Aviv University, Israel

**11:00-11:25 Computation of Singular Solutions using Hermite Methods with H-P Refinement**

*Daniel Appelo*, University of Colorado Boulder, USA; *Thomas M. Hagstrom*, Southern Methodist University, USA

**11:30-11:55 New Integrals of Motion and Singularities in 2D Fluid Dynamics with Free Surface**

*Sergey Dyachenko*, University of Illinois at Urbana-Champaign, USA; *Alexander Dyachenko*, Landau Institute for Theoretical Physics, Russia; *Pavel M. Lushnikov*, University of New Mexico, USA; *Vladimir Zakharov*, University of Arizona, USA

*continued in next column*

Monday, June 11

## MS5

### Stability of Coherent Structures: A Geometric Approach - Part I of III

10:00 AM-12:00 PM

Room: Lassen - 2nd Floor

#### For Part 2 see MS11

The purpose of this special session is to bring together researchers working on various stability issues for special solutions of partial differential equations, such as periodic and solitary waves. Many aspects of stability/instability will be discussed, from spectral to nonlinear, with a special emphasis on geometric methods. It is expected that the speakers will spend some time addressing potential future directions in their respective fields in order to stimulate further discussion and research. The main theme of the special session will be applications of infinite dimensional symplectic geometry in spectral theory of operators obtained by linearizing a partial differential equation about a traveling wave or other special solution. Many of the talks will be concerned with the relation between the Maslov index, a topological invariant defined as the signed number of intersections of a path formed by Lagrangian subspaces with a train of a fixed subspace, and the Morse index, the number of unstable eigenvalues of the linearization.

Organizer: Robert Marangell  
*University of Sydney, Australia*

Organizer: Yuri Latushkin  
*University of Missouri, Columbia, USA*

Organizer: Graham Cox

## MS6

### Recent Advances in Nonlinear Water Wave Modeling with Applications - Part I of II

10:00 AM-12:00 PM

Room: Sequoia - 2nd Floor

#### For Part 2 see MS12

This session focuses on recent advances in numerical/asymptotical/experimental approaches to nonlinear water waves, in particular, with new applications. Main topics to be discussed include computations of highly nonlinear waves possibly interacting with background flows or ocean environments, new asymptotic models for broadband wave fields, and nonlinear wave-wave interactions in a density-stratified fluid, the evolution and stability of traveling and standing waves.

Organizer: Wooyoung Choi  
*New Jersey Institute of Technology, USA*

Organizer: Tore Magnus Taklo

**IP2****Pilot-wave Hydrodynamics: From Chaotic Dynamics to Quantum-like Statistics**

1:45 PM-2:30 PM

*Room: Laguna/Newport - Main Floor**Chair: Dionisios Margetis, University of Maryland, College Park, USA*

A decade ago, Yves Couder in Paris discovered that droplets walking on a vibrating fluid bath exhibit several features previously thought to be exclusive to the microscopic, quantum realm. These walking droplets propel themselves by virtue of a resonant interaction with their own wavefield, and so represent the first macroscopic realization of a pilot-wave system of the form proposed for microscopic quantum dynamics by Louis de Broglie in the 1920s. New experimental and theoretical results allow us to rationalize the emergence of quantum-like behavior in this hydrodynamic pilot-wave system in a number of settings, and explore its potential and limitations as a quantum analog.

**MS7****Defects in Structured Systems: Modeling, Analysis, and Simulation - Part II of II**

3:00 PM-4:30 PM

*Room: Laguna/Newport - Main Floor***For Part 1 see MS1**

Structured systems support patterns comprised of broad ranges of spatial frequencies and meta-stable defects that have long-lifetimes. Defects are often associated with emergent behavior, such as high frequency spatial instabilities that induce additional structure on a background pattern or may arise when systems pass transiently through instability. Defects encumber the physical system with obstacles that frustrate the relaxation to equilibrium or may lead to permanent morphological change. Defects pose many problems to model development, to analysis of temporal behavior and stability, and to effective numerical resolution. This minisymposium will present a diverse collection of talks that address the modeling, analysis, and simulation of defects in physical contexts arising from material science and biological systems.

### Wave-ice Interactions: Nonlinearity, Paradigms, and Modelling Approaches - Part I of III

3:00 PM-5:00 PM

Room: *Hermosa - Main Floor*

#### For Part 2 see MS13

Wave-ice interactions in the marginal ice zones (MIZ) of the polar oceans comprise a complex but important set of processes influencing sea ice extent, ice pack albedo, and ice thickness. In both the Arctic and Antarctic, the ice floe size distribution (FSD) in the MIZ plays a central role in controlling wave propagation through it. Ocean waves break up and shape the ice floes which, in turn, attenuate various wave characteristics, controlling which waves propagate further into the pack. The propagating waves are attenuated by a combination of scattering, floe collisions, and the viscoelastic nature of the ice water mix. Which mechanism is dominant depends on the relative scales of wave length, floe size, and ice thickness. Two main approaches have been taken to model wave-ice interaction, models focused primarily on wave scattering and models which treat the ice water mix as a continuum. In this minisymposium we will bring together mathematicians investigating both points of view and discuss the physical processes responsible for wave attenuation in the ice pack. We will also bring together those studying the interplay between waves and the FSD in both the Arctic and Antarctic. The goal of this minisymposium will be to further our understanding of the actual physical processes at play, discuss modeling paradigms, and consider the challenges associated with modeling the effect waves have on the ice packs.

### Challenges in Mathematical Modeling, Analysis and Computation of Quantum Systems - Part II of II

3:00 PM-5:00 PM

Room: *Sunset - Main Floor*

#### For Part 1 see MS3

The dynamics of quantum systems have been the subject of intensive studies in recent years. The modeling, analysis and computation of interacting particles, Fermions or Bosons, in the quantum regime have offered valuable insight into the dispersion, nonlinearity and other properties of novel atomic systems and materials. The underlying models include aspects of density functional theory, Schrodinger-type and Dirac equations, as well as various mean-field theories. This area of research is rich in mathematical questions. This minisymposium aims to bring together experts who work in theoretical aspects of quantum systems. An objective is to identify challenging issues and generate interactions among specialists.

### Nonlinear Waves and Singularities in Hydrodynamics, Physics and Biology - Part II of III

3:00 PM-5:00 PM

Room: Redondo - Main Floor

For Part 1 see MS4  
For Part 3 see MS16

We encounter waves in all areas of our everyday lives, from ripples on the surface of a cup of coffee and sound waves to the plasma excitations on the sun. Waves of finite amplitude require solutions beyond linear approximation by taking into account nonlinear effects. Examples of the corresponding phenomena can be observed in self-focusing of laser beams in nonlinear media, wave breaking in hydrodynamics and aggregation of bacterial colonies. The minisymposium is devoted to new advances in the theory of nonlinear waves and singularities demonstrating vividly the similarity of approaches in a broad spectrum of applications.

### Stability of Coherent Structures: A Geometric Approach - Part II of III

3:00 PM-5:00 PM

Room: Lassen - 2nd Floor

For Part 1 see MS5  
For Part 3 see MS17

The purpose of this special session is to bring together researchers working on various stability issues for special solutions of partial differential equations, such as periodic and solitary waves. Many aspects of stability/instability will be discussed, from spectral to nonlinear, with a special emphasis on geometric methods. It is expected that the speakers will spend some time addressing potential future directions in their respective fields in order to stimulate further discussion and research. The main theme of the special session will be applications of infinite dimensional symplectic geometry in spectral theory of operators obtained by linearizing a partial differential equation about a traveling wave or other special solution. Many of the talks will be concerned with the relation between the Maslov index, a topological invariant defined as the signed number of intersections of a path formed by Lagrangian subspaces with a train of a fixed subspace, and the Morse index, the number of unstable eigenvalues of the linearization.

## SP1

**Martin D. Kruskal Prize Lecture - On the Mathematical Theory of Graphene and its Artificial Analogues**

5:30 PM-6:15 PM

Room: Laguna/Newport - Main Floor

Chair: To Be Determined

Graphene is a two-dimensional material made up of a single atomic layer of carbon atoms arranged in honeycomb pattern. Many of its remarkable electronic properties, e.g. quasi-particles (wave-packets) that propagate as massless relativistic particles and topologically protected edge states, are closely related to the spectral properties of the underlying single-electron Hamiltonian:  $-\Delta + V(x)$ , where  $V(x)$  is a potential defined on the plane with the symmetries of a hexagonal tiling of the plane. Taking inspiration from graphene, there has been a great deal of activity in the fundamental and applied physics communities related to the properties of waves (photonic, acoustic, elastic,...) in media whose material properties have honeycomb symmetry. In this talk I will review progress on the mathematical theory. In particular, I'll discuss propagation of wave-packets in bulk graphene (the infinite two-dimensional honeycomb structure) and of robust "edge states" along line defects (both sharp terminations of the bulk and domain walls) in graphene-like structures. Finally, I'll discuss ongoing work on metastable edge states which slowly radiate their energy from the edge into the bulk. The latter is a question in "beyond all orders asymptotics", a class of problems to which M.D. Kruskal made seminal contributions.

**Partial Differential Equations as Models for Social Complex Systems**

8:45 AM-9:30 AM

Room: Laguna/Newport - Main Floor

Chair: Andrea Bertozzi, University of California, Los Angeles, USA

Gentrification, urban crime, and rioting activity are all important social issues that have become increasingly relevant as technological advances and a growing population have increased the flow of people and information. Much effort has gone into understanding these topics from a variety of scientific methodologies, including through mathematical modeling via partial differential equations (PDEs), which have the power to shed light on the dynamics of these complex social systems by identifying spatio-temporal patterns that these systems demonstrate. In this talk I will present various PDE systems that have been introduced to model urban crime, rioting activity, and gentrification, including new models that have been recently proposed that have allowed for a deeper intuition and understanding of these social phenomena. The analysis of these systems has required advances in numerical and theoretical techniques, which are interesting in their own right as generic techniques that can be employed in the analysis other PDE systems. Finally, I will highlight how the mathematical analysis of these systems can be combined with data from real-world events to provide a comprehensive picture of the phenomena, and further validate the ability of mathematical results to successfully predict and shed understanding on observed data.

*Room:Sunset - Main Floor***For Part 2 see MS21**

Fifty years after Gardner, Greene, Kruskal and Miura first used the technique to solve the initial value problem for the Korteweg-deVries equation, the inverse scattering transform (IST) still continues to be the subject of considerable study by many research worldwide. Current research efforts include: (i) extending the class of initial conditions that one can effectively treat by IST, (ii) extending the class of nonlinear models for which the IST can be applied, (iii) developing efficient numerical methods for evaluating solutions via IST, (iv) using the IST to characterize the behavior of solutions, (v) studying singular asymptotics such as long-time behavior or semiclassical limits, (v) relating IST predictions to numerical or experimental results in various physical applications. This minisymposium aims at bringing together researchers working on these topics. A follow-up minisymposium will focus on applications.

### Nonlinear Kinetic Waves and Coherent Structures in Vlasov Plasmas - Part I of II

10:00 AM-12:00 PM

Room: Sequoia - 2nd Floor

For Part 2 see MS24

The Kinetic Theory of Plasma Waves is an excellent test bed for self-organization phenomena far from equilibrium, e.g. through the action of intense lasers and magnetic fields. This conference is an ideal interdisciplinary forum to look for ways to reinvigorate this field by cross-fertilizing rigorous mathematical methods with physical intuition and simplified models, drawing inspiration from high fidelity computer simulations. We have assembled eight speakers -- physicist, numerical analysts and applied mathematicians from academia, industry, and the national labs -- whose expertise spans the spectrum just noted, including functional and harmonic analysis techniques, asymptotic methods, and rigorous numerical approaches to the long time evolution of nonlinear phase space structures in Vlasov plasmas. Focus areas for the session include distilling the relationships between Case-van Kampen modes, BGK modes, Zakharov-Karpman solutions, and driven nonlinear electron plasma waves and KEEN waves; and incorporating mild collisional models (such as Fokker-Planck and Lenard-Bernstein) in the presence and absence of ambient and self-generated magnetic fields.

### Dynamics and Finite-dimensional Approximations

10:00 AM-12:00 PM

*Room: Redwood - 2nd Floor*

*Chair: M. J. Philipp Hack, Stanford University, USA*

**10:00-10:15 Application of Koopman Operator Theory to Highway Traffic Dynamics**

*Allan Avila* and *Igor Mezic*, University of California, Santa Barbara, USA

**10:20-10:35 Multi-scale Analysis of Coherent Structures in Wall Turbulence**

*M. J. Philipp Hack*, Stanford University, USA

**10:40-10:55 On the Optimum Layout of a Large Number of Interacting Piezoelectric Flaps in Axial Flow**

*Mikael A. Langthjem*, Yamagata University, Japan

**11:00-11:15 Locating Exact Coherent Structures using Dynamic Mode Decomposition**

*Jacob Page*, University of Bristol, United Kingdom; *Rich Kerswell*, University of Cambridge, United Kingdom

**11:20-11:35 Data-driven Koopman Analysis of Tropical Climate Space-time Variability**

*Joanna Slawinska*, University of Wisconsin, Milwaukee, USA; *Dimitrios Giannakis*, Courant Institute of Mathematical Sciences, New York University, USA

**11:40-11:55 Mixing and Lagrangian Coherent Structures in Two-dimensional Rayleigh-Benard Convection with Periodic Perturbations**

*Masahito Watanabe*, Tomohiro Miyamoto, and *Hiroaki Yoshimura*, Waseda University, Japan

### Lunch Break

12:00 PM-1:45 PM

*Attendees on their own*

Tuesday, June 12

## IP4

### On the Way to the Limit: Oscillatory Stiffness and Low Frequency Dynamics in Climate and Weather Prediction

1:45 PM-2:30 PM

*Room: Laguna/Newport - Main Floor*

*Chair: Gianne Derks, University of Surrey, United Kingdom*

One of the most well-known breakthroughs in scientific computing came just after WWII when a group of mathematicians and scientists came together to create the world's first numerical weather prediction on one of the world's first computers - ENIAC. One of the most important lessons learned from that experience was that there is an intimate relationship between the mathematical structure of the governing equations, their numerical approximation, and understanding their dynamics. Building on that history, I will discuss one of the mathematical issues that leads to computational limitations for many different types of physical phenomenon including climate and weather prediction – oscillatory stiffness in the PDEs from time-scale separation that leads to low-frequency dynamics. I will discuss some of the first mathematical discoveries from geophysical fluid dynamics about how nonlinear phenomenon gives rise to low-frequency solutions and the relationship to fast singular limits studied in PDE's analysis and numerical analysis. I will discuss some of the key mathematical ideas behind new time-parallel numerical integrators, where we use frequency-averaging to approximate the low frequency dynamics.

Beth Wingate

*University of Exeter, United Kingdom*

### Coffee Break

2:30 PM-3:00 PM

*Room: Huntington/Manhattan - Main Floor*

Tuesday, June 12

## MS19

### Wave-ice Interactions: Nonlinearity, Paradigms, and Modelling Approaches - Part III of III

3:00 PM-5:00 PM

Room: Laguna/Newport - Main Floor

#### For Part 2 see MS13

Wave-ice interactions in the marginal ice zones (MIZ) of the polar oceans comprise a complex but important set of processes influencing sea ice extent, ice pack albedo, and ice thickness. In both the Arctic and Antarctic, the ice floe size distribution (FSD) in the MIZ plays a central role in controlling wave propagation through it. Ocean waves break up and shape the ice floes which, in turn, attenuate various wave characteristics, controlling which waves propagate further into the pack. The propagating waves are attenuated by a combination of scattering, floe collisions, and the viscoelastic nature of the ice water mix. Which mechanism is dominant depends on the relative scales of wave length, floe size, and ice thickness. Two main approaches have been taken to model wave-ice interaction, models focused primarily on wave scattering and models which treat the ice water mix as a continuum. In this minisymposium we will bring together mathematicians investigating both points of view and discuss the physical processes responsible for wave attenuation in the ice pack. We will also bring together those studying the interplay between waves and the FSD in both the Arctic and Antarctic. The goal of this minisymposium will be to further our understanding of the actual physical processes at play, discuss modeling paradigms, and consider the challenges associated with modeling the effect waves have on the ice packs.

Organizer: Christian Sampson  
*University of North Carolina, Chapel Hill, USA*

Organizer: Vernon A. Squire  
*University of Otago, New Zealand*

Organizer: Mike Meylan  
*University of Newcastle, Australia*

### 3:00-3:25 The Evolution of Scaling Laws in the Sea Ice Floe Size Distribution

*Christopher Horvat, Brown University, USA*

### 3:30-3:55 Modelling Wave-induced Ice Breakup In the Marginal Ice Zone

*Fabien Montiel and Vernon A. Squire,  
University of Otago, New Zealand*

### 4:00-4:25 Wave-induced Stress and Breaking of Sea Ice in a Coupled Hydrodynamic Discrete-element Wave-ice Model

*Agnieszka Herman, University of Gdansk,  
Poland*

### 4:30-4:55 Seasonal and Interannual Variations of Floe Size Distribution in the Pan-Arctic Ice-Ocean Modeling and Assimilation System

*Jinlun Zhang, University of Washington, USA*

Tuesday, June 12

## MS20

### Water Waves: Comparisons Between Experiments and Predictions - Part II of II

3:00 PM-5:00 PM

Room: Hermosa - Main Floor

#### For Part 1 see MS14

This minisymposium brings together mathematicians, experimentalists, and oceanographers. With a focus on surface water waves, the speakers will present comparisons of numerical and analytical results from mathematical models with data from experiments and the ocean.

Organizer: John Carter

*Seattle University, USA*

### 3:00-3:25 Modelling Faraday Pilot Waves over Submerged Topography

*Paul A. Milewski, University of Bath, United  
Kingdom*

### 3:30-3:55 Bidirectional Fully Dispersive Models for Water Waves over an Uneven Bottom

*Evgueni Din'ev and Henrik Kalisch, University  
of Bergen, Norway; Denys Dutykh,  
Universite de Savoie, France; John Carter,  
Seattle University, USA*

### 4:00-4:25 Relationships between Pressure, Wave-height and Bathymetry

*Katie Oliveras, Seattle University, USA*

### 4:30-4:55 KdV Equations and Wave Breaking in Undular Bores

*Henrik Kalisch, University of Bergen, Norway*

Tuesday, June 12

## MS21

### Inverse Scattering and Dispersive Hydrodynamics - Part II of II

3:00 PM-5:00 PM

Room:Sunset - Main Floor

#### For Part 1 see MS15

Fifty years after Gardner, Greene, Kruskal and Miura first used the technique to solve the initial value problem for the Korteweg-deVries equation, the inverse scattering transform (IST) still continues to be the subject of considerable study by many research worldwide. Current research efforts include: (i) extending the class of initial conditions that one can effectively treat by IST, (ii) extending the class of nonlinear models for which the IST can be applied, (iii) developing efficient numerical methods for evaluating solutions via IST, (iv) using the IST to characterize the behavior of solutions, (v) studying singular asymptotics such as long-time behavior or semiclassical limits, (v) relating IST predictions to numerical or experimental results in various physical applications. This minisymposium aims at bringing together researchers working on these topics. A follow-up minisymposium will focus on applications.

Organizer: Gino Biondini

State University of New York at Buffalo, USA

#### 3:00-3:25 The Semiclassical Defocusing Davey-Stewartson II Equation

Peter D. Miller, University of Michigan, Ann Arbor, USA

#### 3:30-3:55 Numerical Inverse Scattering for Step-like Potentials

Thomas Trogdon, University of California, Irvine, USA

#### 4:00-4:25 The Instabilities of Elliptic Solutions of Integrable PDEs

Bernard Deconinck, University of Washington, USA

#### 4:30-4:55 Small-dispersion Limits for Focusing NLS with Periodic BC

Jeffrey Oregero and Gino Biondini, State University of New York at Buffalo, USA

Tuesday, June 12

## MS22

### Boundary-value Problems for Linear and Nonlinear Integrable Equations - Part I of II

3:00 PM-5:00 PM

Room:Redondo - Main Floor

#### For Part 2 see MS28

Boundary-value problems (BVPs) are ubiquitous in applications. Boundary conditions play an important role in the behavior of the solution and even in the linear case, this role is often still poorly understood. In the last decade, the use of a new method for solving BVPs due to Fokas has been expanded by him, his collaborators, and others. This method contains the classical solution methods as special cases and allows for the explicit solution of problems which could not previously be solved. This session will bring together those interested in BVPs as well as practitioners of the Fokas Method and expose interested parties to the many applications of this technique.

Organizer: Natalie E. Sheils

University of Minnesota, USA

#### 3:00-3:25 Dispersive Quantization in Nonperiodic Domains

Natalie E. Sheils, University of Minnesota, USA

#### 3:30-3:55 Nonlocal Problems for Linear Evolution Equations

David Smith, Yale-NUS College, Singapore

#### 4:00-4:25 New Methods for Diffusive Wave Field Theory

Darren G. Crowdy, Imperial College London, United Kingdom

#### 4:30-4:55 Title Not Available

Beatrice Pelloni, Heriot-Watt University, Edinburgh, United Kingdom

Tuesday, June 12

## MS23

### Patterns and Localized Structures - Part I of III

3:00 PM-5:00 PM

Room:Lassen - 2nd Floor

#### For Part 2 see MS29

Core mechanisms in the formation and dynamics of patterns can be elucidated by studying existence, stability, bifurcations and interactions of in particular fronts, pulses, wave trains, spots and stripes. This minisymposium features a collection of new advances in this field ranging from analytic results to numerical simulations and applications.

Organizer: Martina Chirilus-Bruckner

Leiden University, Netherlands

Organizer: Jens Rademacher

Universität Bremen, Germany

#### 3:00-3:25 Localized Structures in Heterogeneous Media

Martina Chirilus-Bruckner, Leiden University, Netherlands

#### 3:30-3:55 Run-and-Tumble Processes: Equidistribution, Ripples, Clusters, and Blowup

Arnd Scheel, University of Minnesota, Minneapolis, USA; Kyungkeun Kang, Yonsei University, South Korea; Angela Stevens, Max Planck Institute for Mathematics in the Sciences, Germany

#### 4:00-4:25 Selection and Bifurcations of Depinning Fronts Outside the Homoclinic Snaking Region in the Planar Swift-Hohenberg Equation

David Lloyd, University of Surrey, United Kingdom

#### 4:30-4:55 Bifurcation to Locked Fronts in a Two Component Reaction-diffusion System

Matt Holzer, George Mason University, USA

Tuesday, June 12

## MS24

### Nonlinear Kinetic Waves and Coherent Structures in Vlasov Plasmas - Part II of II

3:00 PM-5:00 PM

Room: Sequoia - 2nd Floor

#### For Part 1 see MS18

The Kinetic Theory of Plasma Waves is an excellent test bed for self-organization phenomena far from equilibrium, e.g. through the action of intense lasers and magnetic fields. This conference is an ideal interdisciplinary forum to look for ways to reinvigorate this field by cross-fertilizing rigorous mathematical methods with physical intuition and simplified models, drawing inspiration from high fidelity computer simulations. We have assembled eight speakers -- physicist, numerical analysts and applied mathematicians from academia, industry, and the national labs -- whose expertise spans the spectrum just noted, including functional and harmonic analysis techniques, asymptotic methods, and rigorous numerical approaches to the long time evolution of nonlinear phase space structures in Vlasov plasmas. Focus areas for the session include distilling the relationships between Case-van Kampen modes, BGK modes, Zakharov-Karpman solutions, and driven nonlinear electron plasma waves and KEEN waves; and incorporating mild collisional models (such as Fokker-Planck and Lenard-Bernstein) in the presence and absence of ambient and self-generated magnetic fields.

Organizer: Jon Wilkening  
*University of California, Berkeley, USA*

Organizer: Bedros Afeyan  
*Polymath Research Inc., USA*

### 3:00-3:25 LoKi and Valhalla Simulations of Nonlinear Kinetic Plasma Structures including Collisions

*Jeffrey A. Hittinger, Lawrence Livermore National Laboratory, USA*

### 3:30-3:55 Driven Kinetic Nonlinear Plasma Waves in Multiple Dimensions Controlled by Externally Generated Transient Magnetic Fields

*Richard Sydora, University of Alberta, Canada; B. A. Shadwick, University of Nebraska, USA; Bedros Afeyan, Polymath Research Inc., USA*

### 4:00-4:25 Vlasov and Particle Simulations of Nonlinear Plasma Waves in the Presence of Self-generated Magnetic Fields

*B. A. Shadwick, University of Nebraska, USA; Bedros Afeyan, Polymath Research Inc., USA*

### 4:30-4:55 Shape Function Kinetics (SFK) Simulations of Electron Plasma Waves and Keen Waves

*David Larson, Lawrence Livermore National Laboratory, USA; Bedros Afeyan, Polymath Research Inc., USA*

Tuesday, June 12

## CP4

### Existence of Waves and Fronts

3:00 PM-5:20 PM

Room: Redwood - 2nd Floor

Chair: *Alyssa K. Ortiz, University of Colorado, Colorado Springs, USA*

### 3:00-3:15 Lump Solutions to a (2+1)-Dimensional Fifth-order KdV-like Equation

*Sumayah Batwa and Wen-Xiu Ma, University of South Florida, USA*

### 3:20-3:35 Existence of Stationary Fronts in a System of Two Coupled Wave Equations with Spatial Inhomogeneity

*Jacob Brooks, Gianne Derks, and David Lloyd, University of Surrey, United Kingdom*

### 3:40-3:55 Multiscaled Solitary Waves

*Oleg Derzho, Institute of Thermophysics, Russian Academy of Sciences, Russia*

### 4:00-4:15 Soliton Solutions of Certain Reductions of the Matrix Nonlinear Schrödinger Equation

*Alyssa K. Ortiz and Barbara Prinari, University of Colorado, Colorado Springs, USA*

### 4:20-4:35 On the Existence of the Highest Traveling Solitary Wave Solution to Whitham's Equation

*Tien T. Truong, Lund University, Sweden*

### 4:40-4:55 Asymptotics for the Focusing Integrable Discrete Nonlinear Schrödinger Equation

*Hideshi Yamane, Kwansai Gakuin University, Japan*

### 5:00-5:15 The Semi-classical Sine-Gordon Equation with Pure Impulse Initial Data, Universality at the Gradient Catastrophe

*Bingying Lu, University of Michigan, USA; Peter D. Miller, University of Michigan, Ann Arbor, USA*

## Intermission

5:00 PM-5:15 PM

Tuesday, June 12

## PP1

### Welcome Reception and Poster Session

5:15 PM-7:15 PM

Room:Huntington/Manhattan - Main Floor

#### Computational Simulation on the Dissipation of Water Waves over a Newtonian Fluid-mud Layer

Mohammed Abdulhameed, Federal Polytechnic Bauchi, Nigeria

#### Krein Signature for Instability of PT-Symmetric States

Alexandr Chernyavskiy and Dmitry Pelinovsky, McMaster University, Canada

#### Traveling Waves in Mass and Spring Dimer Fermi-Pasta-Ulam-Tsingou Lattices

Timothy E. Faver and Doug Wright, Drexel University, USA

#### Vortices in Rapidly Rotating Boussinesq Convection

Ryan Goh and C. Eugene Wayne, Boston University, USA

#### Stability of Double Pulse Solutions to the 5th Order KdV Equation, a Numerical Approach

Ross H. Parker and Bjorn Sandstede, Brown University, USA

#### Computational Mechanics of Coherent Structures in Spatiotemporal Systems

Adam Rupe, University of California, Davis, USA

#### Pulse Solutions for the Discrete FitzHugh-Nagumo Equation with Infinite Range Interactions.

Willem M. Schouten and Hermen Jan Hupkes, Leiden University, Netherlands

#### Spatiotemporal Pattern Extraction by Spectral Analysis of Vector-valued Observables

Dimitrios Giannakis, Courant Institute of Mathematical Sciences, New York University, USA; Joanna Slawinska, University of Wisconsin, Milwaukee, USA; Abbas Ourmazd, University of Wisconsin, USA

*continued in next column*

#### Reduction Approach to the Dynamics of Interacting Front Solutions in a Singular Perturbed Bistable System

Takashi Teramoto, Asahikawa Medical University, Japan

#### Noise-induced Tipping in a Periodically-Forced Bistable System

Alexandria Volkening, Ohio State University, USA; Yuxin Chen, Northwestern University, USA; John Gemmer, Wake Forest University, USA; Mary Silber, University of Chicago, USA

#### Rare Events in an Actively Mode-locked Laser Model with Multiple Paths

Nathan L. Sanford, Northwestern University, USA

### Multi-scale Problems of Material Design in Sustainable Energies

8:45 AM-9:30 AM

Room:Laguna/Newport - Main Floor

Chair: Andrea Bertozzi, University of California, Los Angeles, USA

The higher demand for sources of sustainable energies poses tremendous challenges in production and storage capabilities as well as the restructuring of existing and the creation of smart networks for transport of distributed energy. Mathematics plays a key role in understanding the complex problems that arise in exploiting underlying multi-scale structures and processes. In this talk I will focus on the material science aspect and discuss several research topics that illustrate the multi-scale nature of material design in photovoltaics and highlight the impact of thin-film nano-structures on light harvesting and charge transport at complex interfaces. Similar mathematical problems on the interplay of material design and battery function will also be considered.

Barbara Wagner

Weierstrass Institute, Germany

### Coffee Break

9:30 AM-10:00 AM

Room:Huntington/Manhattan - Main Floor

Wednesday, June 13

## MS25

### Large-scale Effects of Local Structures in Complex Systems - Part I of II

10:00 AM-12:00 PM

Room: *Laguna/Newport - Main Floor*

#### For Part 2 see MS50

In this minisymposium we address the connection of large scale flow phenomena with the emergence of meso-scale coherent structures in applications ranging from granular media to polymeric liquids and active suspensions. We are particularly interested in such systems where local changes at the meso-scale can have dramatic effects on the behaviour at the macro-scale and the mathematical challenges that arise from their description.

Organizer: Barbara Wagner  
*Weierstrass Institute, Germany*

Organizer: Andreas Muench  
*University of Oxford, United Kingdom*

#### 10:00-10:25 Signatures of Slip in Thin-film Flows

*Barbara Wagner* and *Dirk Peschka*,  
Weierstrass Institute, Germany; *Andreas Münch*,  
University of Oxford, United Kingdom

#### 10:30-10:55 The Role of Slip and van der Waals Forces in Fiber Coating

*Hangjie Ji*, University of California, Los Angeles, USA

#### 11:00-11:25 Transiently Networked Solutions

*L. Pamela Cook*, University of Delaware, USA; *Lin Zhou*, New York City College of Technology, USA

#### 11:30-11:55 Dynamics and Structure of Active Fluids under Confinement

*Tong Gao*, Michigan State University, USA

Wednesday, June 13

## MS26

### Existence and Stability of Traveling Waves - Part I of III

10:00 AM-12:00 PM

Room: *Hermosa - Main Floor*

#### For Part 2 see MS32

This minisymposium will bring together researchers who study traveling or standing waves: fronts, pulses, wave trains, shock waves, and related structures. In mathematics, these objects are realized as solutions of nonlinear partial differential equations arising in physics, chemistry, and biology. Specifically, this minisymposium presents a selection of new developments concerning the problems of existence, stability, dynamic properties, and bifurcations of those solutions. The techniques reflect the multi-faceted nature of the subject, some analytical and some numerical, or combination of those.

Organizer: *Stephane Lafortune*  
*College of Charleston, USA*

Organizer: *Vahagn Manukian*  
*Miami University Hamilton, USA*

Organizer: *Anna Ghazaryan*  
*Miami University, USA*

#### 10:00-10:25 Center Manifolds for a Class of Degenerate Evolution Equations and Exponential Decay of Kinetic Shocks

*Alin Pogan*, Miami University, USA; *Kevin Zumbrun*, Indiana University, USA

#### 10:30-10:55 On the Ground States for the Schroedinger Equation under Magnetic Trap Potential

*Atanas Stefanov*, University of Kansas, USA

#### 11:00-11:25 Rigorous Numerical Verification of Properties of Traveling Waves

*Blake Barker*, Brigham Young University, USA

#### 11:30-11:55 On the Stability of Fronts with Marginally Unstable Essential Spectrum

*Anna Ghazaryan*, Miami University, USA; *Yuri Latushkin*, University of Missouri, Columbia, USA; *Yang Xinyao*, Xi'an Jiaotong - Liverpool University, China

Wednesday, June 13

## MS27

### Dispersive Hydrodynamics and Applications - Part I of II

10:00 AM-12:00 PM

Room: *Sunset - Main Floor*

#### For Part 2 see MS33

This minisymposium is a follow-up to (and closely related to) the minisymposium "Inverse scattering and dispersive hydrodynamics", but the focus here is more towards applications.

Organizer: *Gino Biondini*

*State University of New York at Buffalo, USA*

#### 10:00-10:25 Nonlinear Schrödinger Equation and the Universal Description of Dispersive Shock Waves

*Gennady El*, Loughborough University, United Kingdom; *Congy Thibault*, Université Paris Sud, France; *Mark A. Hoefer*, University of Colorado Boulder, USA

#### 10:30-10:55 Solitary/Linear Wave-mean Flow Interaction

*Mark A. Hoefer*, University of Colorado Boulder, USA

#### 11:00-11:25 The Dispersive Riemann Problem in Nonlinear Fiber Optics

*Stefano Trillo*, University of Ferrara, Italy; *Gang Xu*, Abdelkrim Bendhamane, *Alexandre Kudlinski*, *Arno Mussot*, and *Matteo Conforti*, University of Lille, France

#### 11:30-11:55 Shock Dynamics of Phase Diagrams: Maxwell Relations, Collective Phenomena and Integrability

*Antonio Moro*, Northumbria University, United Kingdom

Wednesday, June 13

### Nonlinear Geometric Optics and Applications to Stable Singularity Formation

1:45 PM-2:30 PM

Room: Laguna/Newport - Main Floor

Chair: Jason Metcalfe, University of North Carolina, Chapel Hill, USA

Quasilinear hyperbolic systems are evolution-type PDEs that arise in many physical and geometric contexts. In this talk, I will describe some of my recent work on stable singularity formation in solutions to large classes of such systems. The methods have robust features and apply in particular to systems in multiple spatial dimensions with multiple speeds of propagation. The proofs rely on new geo-analytic constructions, notably the development of a theory of nonlinear geometric optics for transport operators that is dynamically adapted to the singularity. I will also highlight some important open problems and connect the results to the broader goal of obtaining a rigorous mathematical theory modeling the long-time behavior of solutions. Some of the works I will discuss are joint with G. Holzegel, J. Luk, and W. Wong.

Jared Speck

Massachusetts Institute of Technology, USA

## Coffee Break

2:30 PM-3:00 PM

### Phantom Jams and Nonlinear Waves in Traffic Flow - Theory and Practice

3:00 PM-5:00 PM

Room: Redondo - Main Floor

Chair: Benjamin Seibold, Temple University, USA

Vehicular traffic is an important real world application in which nonlinear waves phenomena exist and interact with the large-scale emergent phenomena that are observed on roadways. Our society now possesses the technical capabilities to acquire traffic flow data at fine temporal and spatial resolutions, which enables us to track flow features on the vehicle scale. This allows us to ask more ambitious questions: rather than estimating, predicting, and controlling for throughput maximization, we can now think about optimizing for fuel consumption, safety, and other more complex flow characteristics. In addition, we are about to insert disruptive technologies into the traffic stream (autonomous vehicles, synchronized e-taxi fleets, etc.) that will fundamentally change the way traffic flows, and will also provide us with completely new ways to affect and control traffic flow, from the vehicle-to-vehicle scale all the way to metropolitan corridor scales. Delivered by applied mathematics and civil engineering faculty, this mini-tutorial provides a mathematical introduction to traffic flow theory, an overview of models for traffic waves and simulation tools, and many perspectives on data collection, traffic flow control in reality, traffic experiments, legal constraints, and cultural considerations.

Speakers:

Benjamin Seibold  
Temple University, USA

Daniel Work  
Vanderbilt University, USA

## MS31

### Recent Development in High Performance Nonlinear Optical Systems - Part I of III

3:00 PM-5:00 PM

Room: *Laguna/Newport - Main Floor*

#### For Part 2 see MS37

This minisymposium focuses on recent developments in nonlinear waves with application to lasers, resonators, photonics and metamaterials. Topics include but are not limited to: first, novel and realistic models of optical systems that reflect the current state-of-the-art in optical experiments; second, the existence, stability and dynamics of traveling wave or periodic solutions; third, the balance of nonlinearity, dispersion, gain and loss; finally, optimization and control of optical pulses for high energy, low noise, and short duration. This minisymposium aims to bring together balanced perspectives including theory, computation and experiment in the fields of nonlinear science and optical systems.

### Existence and Stability of Traveling Waves - Part II of III

3:00 PM-5:00 PM

Room: *Hermosa - Main Floor*

#### For Part 1 see MS26

#### For Part 3 see MS38

This minisymposium will bring together researchers who study traveling or standing waves: fronts, pulses, wave trains, shock waves, and related structures. In mathematics, these objects are realized as solutions of nonlinear partial differential equations arising in physics, chemistry, and biology. Specifically, this minisymposium presents a selection of new developments concerning the problems of existence, stability, dynamic properties, and bifurcations of those solutions. The techniques reflect the multi-faceted nature of the subject, some analytical and some numerical, or combination of those.

Organizer: Anna Ghazaryan

*Miami University, USA*

Organizer: Stephane Lafortune

*College of Charleston, USA*

Organizer: Vahagn Manukian

*Miami University Hamilton, USA*

#### 3:00-3:25 Stability of Standing Waves for a Nonlocal NLS Equation

*Milena Stanislavova, University of Kansas, Lawrence, USA; Atanas Stefanov, University of Kansas, USA*

#### 3:30-3:55 Spectral Stability of Solutions to the Vortex Filament Hierarchy

*Stephane Lafortune and Thomas Ivey, College of Charleston, USA*

#### 4:00-4:25 Spectral Stability of Inviscid Roll Waves

*Mathew Johnson, University of Kansas, USA*

#### 4:30-4:55 Front Solutions of Modified Rosenzweig-MacArthur Model

*Hong Cai and Anna Ghazaryan, Miami University, USA; Vahagn Manukian, Miami University Hamilton, USA*

Wednesday, June 13

## MS33

### Dispersive Hydrodynamics and Applications - Part II of II

3:00 PM-5:00 PM

Room: *Sunset - Main Floor*

#### For Part 1 see MS27

This minisymposium is a follow-up to (and closely related to) the minisymposium "Inverse scattering and dispersive hydrodynamics", but the focus here is more towards applications.

Organizer: Gino Biondini

*State University of New York at Buffalo, USA*

#### 3:00-3:25 Double Scaling in the Relaxation Time in the $\beta$ -FPUT Model

*Miguel Onorato, University of Turin, Italy; Yuri V. Lvov, Rensselaer Polytechnic Institute, USA*

#### 3:30-3:55 Rogue Wave Formation Modeled by the Focusing Nonlinear Schroedinger Equation

*Alexander Tovbis, University of Central Florida, USA*

#### 4:00-4:25 Interplay between the IST and the Unified Transform: Applications to PDEs on Graphs and Nonlocal Reductions

*Vincent Caudrelier, Leeds University, United Kingdom*

#### 4:30-4:55 Universal Behavior of Modulationally Unstable Media with Non-zero Boundary Conditions

*Sitai Li and Gino Biondini, State University of New York at Buffalo, USA; Dionyssi Mantzavinos, University of Kansas, USA; Stefano Trillo, University of Ferrara, Italy*

Wednesday, June 13

## MS34

### Patterns and Localized Structures - Part III of III

3:00 PM-5:00 PM

*Room: Lassen - 2nd Floor*

#### For Part 2 see MS29

Core mechanisms in the formation and dynamics of patterns can be elucidated by studying existence, stability, bifurcations and interactions of in particular fronts, pulses, wave trains, spots and stripes. This minisymposium features a collection of new advances in this field ranging from analytic results to numerical simulations and applications.

Organizer: Martina Chirilus-Bruckner

*Leiden University, Netherlands*

Organizer: Jens Rademacher

*Universität Bremen, Germany*

#### 3:00-3:25 Transitions from Localised Multiple-spike Waves to Bumps in Spatially-extended Networks of Integrate-and-Fire Neurons

*Daniele Avitabile, University of Nottingham, United Kingdom*

#### 3:30-3:55 Moving Inhomogeneities in Oscillating Chemical Reactions

*Gabriela Jaramillo, University of Arizona, USA*

#### 3:55-3:55 Stability of Hamiltonian Lattice Waves in the High-energy Limit

*Michael Herrmann, Technische Universität Braunschweig, Germany*

#### 4:00-4:25 Traveling Waves in a Stochastic Nagumo Equation

*Christian Hamster and Hermen Jan Hupkes, Leiden University, Netherlands*

Wednesday, June 13

## MS35

### Boundaries, Fronts, and Interfaces in Biological and Physical Applications - Part I of III

3:00 PM-5:00 PM

*Room: Redwood - 2nd Floor*

#### For Part 2 see MS42

The natural world exhibits many nonlinear phenomena characterized by the separation of and interaction between regions with different behavior. The dynamics of these interfaces or boundaries characterizes, at least in part, the large-scale behavior of the overarching complex system. Examples occur in widely disparate fields, such as the growth of tumors, transonic shocks and vortex shedding in gas dynamics, the growth of bacteria colonies or even the rise of cooperation in evolutionary games on structured populations. This minisymposium will bring together researchers with expertise in conservation laws, singularly perturbed systems, and modeling to discuss their techniques, insights and understanding of boundaries and interfaces from a variety of viewpoints and disciplines.

Organizer: Eun Heui Kim

*California State University, Long Beach, USA*

Organizer: Chung-Min Lee

*California State University, Long Beach, USA*

Organizer: Hui Sun

*California State University, Long Beach, USA*

Organizer: James von Brecht

*California State University, Long Beach, USA*

#### 3:00-3:25 On the Relative Entropy Method for Thermoviscoelasticity

*Cleopatra Christoforou, University of Cyprus, Cyprus; Athanasios Tzavaras, King Abdullah University of Science & Technology (KAUST), Saudi Arabia*

#### 3:30-3:55 Wave Model for Nematic Liquid Crystal

*Geng Chen, University of Kansas, USA*

#### 4:00-4:25 Stokes Expansions and Asymptotic Models of Water Waves

*Ching-hsiao A. Cheng, National Central University, Taiwan; Rafael Granero-Belinchón, Université Claude Bernard Lyon 1, France; Steve Shkoller, University of California, Davis, USA; Jon Wilkening, University of California, Berkeley, USA*

#### 4:30-4:55 On the Dynamics of Ferrofluids: A Relaxation Limit from the Rosensweig Model Towards Equilibrium

*Konstantina Trivisa and Franziska Weber, University of Maryland, USA*

**MS36****Nonlinear Waves in Nature: Fluid, Plasma and Applied Physics - Part I of III**

3:00 PM-5:00 PM

Room: Sequoia - 2nd Floor

**For Part 2 see MS43**

The spectacular phenomena that we observe in our everyday life is often a manifestation of a nonlinear model: a Kelvin-Helmholtz instability shapes the clouds in the sky, a water wave breaking on the shore, or a ray of charged particles interacting with plasma in magnetosphere producing aurora in the northern sky. Our section is devoted to the recent advances in the field of nonlinear waves in fluids, plasmas and optics.

Organizer: Sergey Dyachenko  
University of Illinois at Urbana-Champaign, USA

Organizer: Denis Silantyev  
New York University, USA

**3:00-3:25 Variation of Inverse Cascade Spectrum for Gravity Waves due to Condensate**

Alexander O. Korotkevich, University of New Mexico, USA and Russian Academy of Sciences, Russia

**3:30-3:55 Appearance of Traveling-standing Waves in Deep Water**

Anastassiya Semenova, University of New Mexico, USA

**4:00-4:25 Efficient Numerical Methods for Initial Value Problem with Randomness**

Amir Sagiv, Adi Ditzkowski, and Gadi Fibich, Tel Aviv University, Israel

**4:30-4:55 Zonal Flows: A Quasilinear Foothold to Gaining Insight**

Jeff Parker, Lawrence Livermore National Laboratory, USA

**Intermission**

5:00 PM-5:15 PM

Wednesday, June 13

**PD1****Hot-topic Session: Future Directions for Research**

5:15 PM-6:15 PM

Room: Laguna/Newport - Main Floor

Chair: J. Douglas Wright, Drexel University, USA

The panelists (each of who is either an invited speaker, or an organizer for a mini-tutorial) will first provide a short presentation (2-4 minutes) on what he/she thinks are the interesting research questions in his/her area. After the presentations, the floor will be opened for questions and discussion.

**Panelists:**

Alejandro Aceves  
Southern Methodist University, USA

G. Bard Ermentrout  
University of Pittsburgh, USA

Keith Promislow  
Michigan State University, USA

Nancy Rodriguez-Bunn  
University of North Carolina at Chapel Hill, USA

Benjamin Seibold  
Temple University, USA

Barbara Wagner  
Weierstrass Institute, Germany

Beth Wingate  
University of Exeter, United Kingdom

**Intermission**

6:15 PM-6:30 PM

**SIAG/NWCS Business Meeting**

6:30 PM-7:15 PM

Room: Laguna/Newport - Main Floor

Complimentary beer and wine will be served.  

**Thursday, June 14****Registration**

8:15 AM-3:30 PM

Room: Malibu - Main Floor

**Closing Remarks**

8:40 AM-8:45 AM

Room: Laguna/Newport - Main Floor

**IP7****The Rainbow of Spatio-temporal Dynamics in Nonlinear Optics: The Story of Multi-color Light Filaments, Vortices and Other Patterns and the Mathematics Behind It**

8:45 AM-9:30 AM

Room: Laguna/Newport - Main Floor

Chair: Chris Jones, University of North Carolina, USA

Since the first observation of a nonlinear process in light matter interaction in 1961, better lasers and designs of photonic structures have opened new ways to explore nonlinear phenomena with many important technological applications. In this talk we will focus our attention to spatio-temporal dynamics and coherent modes described by nonlinear Schrödinger-like equations. While the presentation will center on models and experiments of light filament propagation in air, we will also discuss recent optical experiments in quadratic media, multi-mode fibers and fiber arrays; most in need of a fresh theoretical formulation.

Alejandro Aceves

Southern Methodist University, USA

**Coffee Break**

9:30 AM-10:00 AM

Room: Huntington/Manhattan - Main Floor

Thursday, June 14

### Recent Development in High Performance Nonlinear Optical Systems - Part II of III

10:00 AM-11:30 AM

Room: Laguna/Newport - Main Floor

For Part 1 see MS31

For Part 3 see MS44

This minisymposium focuses on recent developments in nonlinear waves with application to lasers, resonators, photonics and metamaterials. Topics include but are not limited to: first, novel and realistic models of optical systems that reflect the current state-of-the-art in optical experiments; second, the existence, stability and dynamics of traveling wave or periodic solutions; third, the balance of nonlinearity, dispersion, gain and loss; finally, optimization and control of optical pulses for high energy, low noise, and short duration. This minisymposium aims to bring together balanced perspectives including theory, computation and experiment in the fields of nonlinear science and optical systems.

Organizer: Yannan Shen

California State University, Northridge, USA

Organizer: Richard O. Moore

New Jersey Institute of Technology, USA

Organizer: Curtis R. Menyuk

University of Maryland, Baltimore County, USA

Organizer: David Ambrose

Drexel University, USA

#### 10:00- 10:25 Deterministic Triggering of Cavity Solitons in a Microresonator

Feng Li, Zhe Kang, Jinhui Yuan, and P. K. Alex Wai, Hong Kong Polytechnic University, China

#### 10:30- 10:55 Optical Mode Stability and Dynamics in Nonlinear Twisted Pt-symmetric Structures

Claudia Castro-Castro, University of Texas at Austin, USA; Alejandro Aceves, Southern Methodist University, USA; Yannan Shen, California State University, Northridge, USA

#### 11:00- 11:25 Integrable Models for Ultrashort Pulse Propagation

Bao-Feng Feng, University of Texas - Pan American, USA

Thursday, June 14

## MS38

### Existence and Stability of Traveling Waves - Part III of III

10:00 AM-12:00 PM

Room: Hermosa - Main Floor

For Part 2 see MS32

This session will bring together researchers who study fronts, pulses, wave trains and patterns of more complex structure which are realized as special solutions of nonlinear partial differential equations. Existence, stability, dynamic properties, and bifurcations of those solutions will be discussed, from both analytical and numerical point of views.

Organizer: Vahagn Manukian

Miami University Hamilton, USA

Organizer: Anna Ghazaryan

Miami University, USA

Organizer: Stephane Lafortune

College of Charleston, USA

#### 10:00-10:25 Snaky Structures of Localized Patterns with Oscillatory Tails and Collision Dynamics in Heterogeneous Media

Yasumasa Nishiura, Tohoku University, Japan

#### 10:30-10:55 Gelfand Type Problem for Turbulent Jets

Peter Gordon, Kent State University, USA

#### 11:00-11:25 One-dimensional Periodic Solutions in a Three-component Reaction-diffusion System

Gianne Derks, University of Surrey, United Kingdom; Peter van Heijster, Queensland University of Technology, Australia; David Lloyd, University of Surrey, United Kingdom

#### 11:30-11:55 Kink Dynamics in a Parametric $\Phi^8$ Model

Aslihan Demirkaya, University of Hartford, USA

Thursday, June 14

## MS39

### Vegetation Patterns: Modeling, Analysis, and Data - Part I of II

10:00 AM-12:00 PM

Room: Sunset - Main Floor

For Part 2 see MS45

Regular spatial patterns in the vegetation growth of dryland ecosystems provide a striking example of self-organization on a community scale. These patterns most often appear on very gentle slopes as bands of vegetation separated by bare soil and can have characteristic length scales of 10-100 meters and evolve on 100-1000 year time scales. However, a diversity of patterns including regular spots of vegetation and circular gaps in uniform vegetation have also been observed on less graded terrain. This session focuses on the development and analysis of models that capture the various kinds of positive feedback between the individual plants and water availability that are thought to be responsible for the observed patterns. We also highlight the role that the increasing availability of spatial information from satellites and other sources can play in developing deeper insights into the mechanisms responsible for pattern formation and inferring the dynamics of the system.

Organizer: Jasper Weinburd

**Spatial Dynamics: Local and Global Results - Part I of II**

10:00 AM-12:00 PM

*Room: Lassen - 2nd Floor*

**For Part 2 see MS47**

We wish to showcase recent work which implements, extends, or draws inspiration from the spatial dynamics approach, which has proved very successful in the study of coherent structures in a variety of physical systems, such as cardiac electrophysiology, defect dynamics in crystallization, and mathematical neuroscience. Here one typically studies specific solutions of a PDE by posing it as an (infinite dimensional) dynamical system in a spatial variable. Coherent states can then be found by locating bounded solutions, such as periodic, homoclinic, and heteroclinic orbits. Stability and bifurcations of such solutions can be studied by using an associated linear spatial flow to locate eigenvalues, for example by constructing eigenfunctions using Lin's method, or by formulating an Evans function. We wish to exhibit recent advances in existence, stability, and bifurcations, which extend this framework to more complicated situations, such as higher dimensional spatial domains. We also hope to highlight recent work which draws upon this theory for inspiration and brings in new techniques from areas such as topology and functional analysis to study systems which are not readily posed as a spatial dynamical system, such as nonlocal equations. In all of this, we aim to showcase early-career researchers in an effort to provide exposure for their research and to work on developing a strong community among the coming generation of nonlinear waves and coherent structures researchers.

**IP8****Propagating Waves in Nonlocal Neural Media**

1:45 PM-2:30 PM

*Room: Laguna/Newport - Main Floor**Chair: Jens Rademacher, Universität Bremen, Germany*

Traveling waves are among the most commonly spatio-temporal dynamics observed in the recording of electrical activity in the brain. They range from stimulus evoked waves, propagation of pathological behavior such as epilepsy and migraine auras to more complex patterns such as spiral waves and other types of rotating waves. In this talk, I will first discuss the different classes of traveling waves, mainly divided between waves in excitable media and so-called phase waves. Interactions in a piece of neural tissue are not mediated by simple diffusion, but rather, nonlocal connections that are mediated by convolutions in space. I will discuss recent mathematical and computational work on the existence of wave fronts, wave pulses, and nonlocal phase models. I will relate the mathematical results to some experimental findings and discuss some open problems.

### Spatial Dynamics: Local and Global Results - Part II of II

3:00 PM-5:00 PM

Room:Lassen - 2nd Floor

For Part 1 see MS41

We wish to showcase recent work which implements, extends, or draws inspiration from the spatial dynamics approach, which has proved very successful in the study of coherent structures in a variety of physical systems, such as cardiac electrophysiology, defect dynamics in crystallization, and mathematical neuroscience. Here one typically studies specific solutions of a PDE by posing it as an (infinite dimensional) dynamical system in a spatial variable. Coherent states can then be found by locating bounded solutions, such as periodic, homoclinic, and heteroclinic orbits. Stability and bifurcations of such solutions can be studied by using an associated linear spatial flow to locate eigenvalues, for example by constructing eigenfunctions using Lin's method, or by formulating an Evans function. We wish to exhibit recent advances in existence, stability, and bifurcations, which extend this framework to more complicated situations, such as higher dimensional spatial domains. We also hope to highlight recent work which draws upon this theory for inspiration and brings in new techniques from areas such as topology and functional analysis to study systems which are not readily posed as a spatial dynamical system, such as nonlocal equations. In all of this, we aim to showcase early-career researchers in an effort to provide exposure for their research and to work on developing a strong community among the coming generation of nonlinear waves and coherent structures researchers.

Organizer: Berry Bakker  
*VU University, Amsterdam, Netherlands*

Organizer: Jason Bramburger  
*Brown University, USA*

Organizer: Ryan Goh  
*Boston University, USA*

*continued in next column*

### 3:00-3:25 Large Fronts in Nonlocal Equations using Conley--Floer Theory

*Berry Bakker, VU University, Amsterdam, Netherlands*

### 3:30-3:55 Spatial Dynamics in Global Bifurcation Arguments

*Miles Wheeler, University of Vienna, Austria*

### 4:00-4:25 Bifurcation of Spikes From the Essential Spectrum in Nonlocally Coupled Systems

*Tianyu Tao, University of Minnesota, USA*

### 4:30-4:55 The Stability of Grain Boundaries in Swift-Hohenberg Equation

*Qiliang Wu, Ohio University, USA*

Thursday, June 14

## MS48

### Boundaries, Fronts, and Interfaces in Biological and Physical Applications - Part III of III

3:00 PM-5:00 PM

Room:Redwood - 2nd Floor

For Part 2 see MS42

The natural world exhibits many nonlinear phenomena characterized by the separation of and interaction between regions with different behavior. The dynamics of these interfaces or boundaries characterizes, at least in part, the large-scale behavior of the overarching complex system. Examples occur in widely disparate fields, such as the growth of tumors, transonic shocks and vortex shedding in gas dynamics, the growth of bacteria colonies or even the rise of cooperation in evolutionary games on structured populations. This minisymposium will bring together researchers with expertise in conservation laws, singularly perturbed systems, and modeling to discuss their techniques, insights and understanding of boundaries and interfaces from a variety of viewpoints and disciplines.

Organizer: Eun Heui Kim  
*California State University, Long Beach, USA*

Organizer: Chung-Min Lee  
*California State University, Long Beach, USA*

Organizer: Hui Sun  
*California State University, Long Beach, USA*

Organizer: James von Brecht  
*California State University, Long Beach, USA*

*continued on next page*

Thursday, June 14

## MS48

### Boundaries, Fronts, and Interfaces in Biological and Physical Applications - Part III of III

3:00 PM-5:00 PM

continued

#### 3:00-3:25 From Slow Diffusion to a Hard Height Constraint: A Singular Limit of Keller-Segel

*Katy Craig*, University of California, Santa Barbara, USA; *Inwon Kim*, University of California, Los Angeles, USA; *Ihsan Topaloglu*, Virginia Commonwealth University, USA; *Yao Yao*, Georgia Institute of Technology, USA

#### 3:30-3:55 Bubble Assemblies in Ternary Systems with Long Range Interaction

*Yanxiang Zhao*, Chong Wang, and Xiaofeng Ren, George Washington University, USA

#### 4:00-4:25 Geometric Control of Active Collective Motion

*Maxime Theillard*, University of California, Merced, USA; *Roberto Alonso-Matilla* and *David Saintillan*, University of California, San Diego, USA

#### 4:30-4:55 Expansion Dynamics of Bacterial Populations

*Jonas Cremer*, University of California, San Diego, USA

Thursday, June 14

## MS49

### Nonlinear Waves in Nature: Fluid, Plasma and Applied Physics - Part III of III

3:00 PM-5:00 PM

Room: Sequoia - 2nd Floor

For Part 2 see MS43

The spectacular phenomena that we observe in our everyday life is often a manifestation of a nonlinear model: a Kelvin-Helmholtz instability shapes the clouds in the sky, a water wave breaking on the shore, or a ray of charged particles interacting with plasma in magnetosphere producing aurora in the northern sky. Our section is devoted to the recent advances in the field of nonlinear waves in fluids, plasmas and optics.

Organizer: *Sergey Dyachenko*

*University of Illinois at Urbana-Champaign, USA*

Organizer: *Denis Silantyev*

*New York University, USA*

#### 3:00-3:25 Inhomogeneous Wave Turbulence as an Effective Quantum Plasma: A Study of Zonal Flows

*Ilya Dodin*, Princeton Plasma Physics Laboratory, USA; *Daniel E. Ruiz*, Sandia National Laboratories, USA; *Hongxuan Zhu*, Princeton University, USA; *Yao Zhou*, Princeton Plasma Physics Laboratory, USA

#### 3:30-3:55 Stochastic Dynamics in Spatially Extended Magnetic Systems

*Yuan Gao*, University of North Carolina at Chapel Hill, USA; *Katherine Newhall*, Rensselaer Polytechnic Institute, USA; *Jeremy L. Marzuola*, University of North Carolina, Chapel Hill, USA

#### 4:00-4:25 High-order Accurate Conservative Finite Difference Methods for Vlasov Equation

*Jeffrey W. Banks*, Rensselaer Polytechnic Institute, USA

#### 4:30-4:55 Numerical Study of the Second-order Correct Hamiltonian Model for Unidirectional Water Waves

*Youngjoon Hong*, University of Illinois, Chicago, USA

Thursday, June 14

## MS50

### Large-scale Effects of Local Structures in Complex Systems - Part II of II

3:00 PM-4:30 PM

Room: Hermosa - Main Floor

For Part 1 see MS25

In this minisymposium we address the connection of large scale flow phenomena with the emergence of meso-scale coherent structures in applications ranging from granular media to polymeric liquids and active suspensions. We are particularly interested in such systems where local changes at the meso-scale can have dramatic effects on the behaviour at the macro-scale and the mathematical challenges that arise from their description.

Organizer: *Barbara Wagner*

*Weierstrass Institute, Germany*

Organizer: *Andreas Muench*

*University of Oxford, United Kingdom*

#### 3:00-3:25 Hydrodynamic Models of Two-dimensional Active Liquid Crystals

*Ananyo Maitra*, Université Paris Sud, France

#### 3:30-3:55 Well-posed Dynamics of Dense Granular Materials

*Michael Shearer*, North Carolina State University, USA

#### 4:00-4:25 On Yield Stress of Concentrated Suspensions

*Andreas Muench*, University of Oxford, United Kingdom; *Barbara Wagner*, Weierstrass Institute, Germany
