

### Erratum

In James Case's review of three books describing Fermat's Last Theorem (*SIAM News*, April 1998, page 7), the list of matrices (5) is incorrect. It should read:

$$\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \begin{pmatrix} -1 & 1 \\ 0 & 1 \end{pmatrix} \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} 1 & -1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} 0 & 1 \\ -1 & 1 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 1 & -1 \end{pmatrix}.$$

The matrices do not—as written—form a group under the usual matrix multiplication. They can, however, be made to do so in any of several ways.
